

WESTMINSTER

Standley Lake Boating Taskforce
UPDATE ON TAGGING PROTOCOLS
Wednesday, May 29, 2019

Per the direction of the SBLT, a subcommittee focused on tagging (a protocol critical to the boating program) has been formed and has met three times. The tagging subcommittee is comprised of FoSL members and Staff and is making significant progress towards finding a solution that potentially could restore boating on Standley Lake in the future while protecting the drinking water supply. While the tagging committee continues to vet and test the proposed “Tagging 2.0” option, steps have also been made to expand the search for other potentially more robust tagging options. Through this process, the committee has identified several other potential options and will be obtaining new tag, wire and lock samples for continued vetting and testing. This committee continues to work collaboratively with City staff in an effort to find a mutually agreeable solution.
