

Staff Report

TO: The Mayor and Members of the City Council

DATE: December 30, 2015

SUBJECT: Study Session Agenda for January 4, 2016

PREPARED BY: Donald M. Tripp, City Manager

Please Note: Study Sessions and Post City Council meetings are open to the public, and individuals are welcome to attend and observe. However, these meetings are not intended to be interactive with the audience, as this time is set aside for City Council to receive information, make inquiries, and provide Staff with policy direction.

Looking ahead to next Monday night's Study Session, the following schedule has been prepared:

A light dinner will be served in the Council Family Room

6:00 P.M.

CITY COUNCIL REPORTS

- 1. Report from Mayor (5 minutes)
- 2. Reports from City Councillors (10 minutes)

CITY MANAGER'S REPORT

PRESENTATIONS 6:30 P.M.

- 1. Westminster Homeless Initiative Draft Study
- 2. Proposed 2016 Citizen Survey

EXECUTIVE SESSION

1. Obtain Direction from City Council re proposed Economic Development Agreement with Local Foods Campus Inc. pursuant to WMC 1-11-3(C)(4), WMC 1-11-3 (C)(7) and CRS 24-6-402(4)(e)

INFORMATION ONLY ITEMS

None at this time.

Additional items may come up between now and Monday night. City Council will be apprised of any changes to the Study Session meeting schedule.

Respectfully submitted,

Donald M. Tripp City Manager

NOTE: Persons needing an accommodation must notify the City Manager's Office no later than noon the Thursday prior to the scheduled Study Session to allow adequate time to make arrangements. You can call <u>303-658-2161/TTY 711 or State Relay</u>) or write to mbarajas@cityofwestminster.us to make a reasonable accommodation request.

Staff Report

City Council Study Session Meeting January 4, 2016

SUBJECT: Westminster Homeless Initiative Draft Study

PREPARED BY: Kate Skarbek, Library Services Manager

Homeless Initiative Task Force Members

Recommended City Council Action

Review the this Westminster Homeless Initiative Draft Study (WHIDS); discuss which recommendations Council would like to pursue; identify what additional information, if any, Council may need to move forward on this issue; or provide the Task Force with other forms of guidance.

Summary Statement

Twelve City staff (see Attachment A for task force list) representing five City departments and two offices met five times during the first quarter of 2015 to share what staff members are observing: an increase in homeless people who frequent public facilities, parks, open space, neighborhoods and private businesses throughout the City, often requiring the heightened provision of City services. This group is referred to as the Homeless Initiative Task Force. In addition to meeting time, Task Force members also participated in ride-a-longs with Westminster Police Department to observe first-hand some of the homeless issues and independently researched how the homeless issue is playing out nationally in some detail. Attachment B is a compilation of research material put together by the Task Force.

The Task Force has been asked to help identify the role Westminster could play in this critical and challenging issue. At this early point, the Task Force agrees there is both a need to identify how best to serve the homeless population and a need for additional municipal tools that hold a person accountable for behavior in public, just as is true with all individuals.

The Task Force acknowledges the complex and evolving national debate on the homeless issue. For instance, in this past legislative session, the General Assembly considered a bill that would have enacted a "Homeless Bill of Rights." Neighboring municipalities are similarly struggling to find ways to address homeless issues and have, at times, faced criticism for their efforts.

Aware of this dynamic, the Task Force consulted a variety of reference materials, experts and organizations in order to understand the many facets of this politically sensitive issue. The Westminster Homeless Initiative Draft Study (WHIDS) is, the Task Force believes, a balanced report that identifies the potential political pitfalls while also seeking a solution that is best suited to Westminster's unique needs.

The Task Force also stresses that the WHIDS is a first step to addressing the complex homeless issue. In order to lay a foundation for future discussion and policy decisions, the Task Force is identifying three potential approaches for Council's consideration.

The Task Force has compiled preliminary recommendations for Council to discuss and determine next steps. First, the Task Force is suggesting the consideration of a staffing resource addition to champion homeless issues within the City, to serve as a resource for citizens and City staff, and to provide support for City efforts to address this issue on a regional basis. Second, the Task Force suggests the formation of a coalition to be led by the City and to be comprised of area stakeholders, citizen groups, private service organizations, public agencies, and those most knowledgeable about homelessness to gain yet a better understanding of the complex causes and effects of the homeless issue within our City. Third, and most readily available is to revise the City Code to provide first responders with stronger tools, such as an anti-camping ordinance, to more effectively address disruptive behavior and issues currently negatively affecting quality of life for residents.

Expenditure Required: To be determined

Source of Funds: To be determined

Policy Issues

There is a threshold policy question: Should the City take affirmative steps to address homeless issues within the City?

If so:

Should the City add additional staffing resources to serve as a resource on homeless issues?

Should the City create a coalition comprised of area stakeholders, citizen groups, private service organizations, public agencies and those most knowledgeable about homelessness and issues surrounding this complex issue?

Should City Council and the City of Westminster revise the City Code to improve tools for addressing undesirable behavior in public spaces?

Should the Task Force explore different approaches and alternatives, upon direction from City Council, for how to address the homeless issue?

Alternatives

Council could decide not to devote either monetary or staff time resources to the homeless issue within the City, instead relying on existing City, County and private agencies to manage the issues. Staff does not recommend this action, as it has not proven to be an effective means of handling behavioral and use problems that are occurring at City facilities and parks, neighborhoods, and at local businesses within the City. With no change to existing policies or approaches, City staff and residents will likely continue to struggle ineffectively with homeless issues, and the homeless individuals within our City will likely not receive as much assistance as is possible.

Council could decide to support only one or two of WHIDS' three recommendations based on an evaluation of the need and resources available. This approach is not preferred but is a viable option, depending on funding levels. Yet, the Task Force feels this complex issue requires an immediate multi-pronged approach.

Council could decide to explore an entirely different path to address homeless issues and could instruct WHIDS to follow another specific direction or directions or to discontinue its efforts.

Background Information

In early 2015, the Homeless Initiative Task Force was charged with learning more about a growing Westminster homeless population. Representatives from the most heavily impacted departments within the City brought with them a focus on how to maintain and enforce a standard for acceptable behavior in public areas. Other departments' representatives brought with them an emphasis on social services, aid and possible rehabilitation of the homeless population.

The first undertaking of the Task Force was to become more informed. The Task Force studied homelessness trends, lifestyles and needs during the first quarter 2015. See **Attachment B** for a compilation of materials referenced and research conducted by the Task Force. The Task Force's initial efforts were to educate its members by sharing information among members. City "front-line" staff who had directly experienced homeless issues, such as Police Department and Library staff, shared their perspectives with the Task Force as a whole. Those members without first-hand

knowledge joined the Police Department on ride-a-longs and site visits to observe the City's current state of homelessness.

The education process also included gaining an understanding of the resources currently available in the Metro area and learning how neighboring municipalities are addressing similar issues. The committee invited in guest speakers Gary Sanford, executive director of the Metro Denver Homeless Initiative, a non-profit organization that coordinates the Continuum of Care for the seven (7) metro counties, and Aaron Gagne, the Aurora Neighborhood Services Manager, who oversees that City's homeless program.

Staff members mined data available from various City workgroups to determine how homeless issues are already impacting City services. These findings will be discussed below. Various members also reached out to other local organizations, including Center for Career & Community Enrichment ("3CE")¹, Volunteers of America and Growing Home, to interview them on what services they offer and to identify changes or trends in the area. The members shared articles and other published research through e-mail messages (see **Attachment B**) in addition to meeting on five occasions starting in January 2015. The Heart of Westminster, a community organization, invited Task Force members to speak at community meetings in both March and April. Several Task Force members did attend these citizen meetings and shared information about the City's WHIDS with interested citizens.

Task Force members learned a great deal and gained a better perspective on the current homeless Issues. An overview of some of the most salient information that informed the Task Force's recommendations follows below.

Defining Homeless

The formal definition of homelessness varies. A commonly cited definition is from the U.S. Department of Housing and Urban Development (HUD). It is the most restrictive in its interpretation, and most national organizations that provide homelessness services have their own broader definitions. This means that not all statistics can be relied on as "apples to apples" comparisons

The Task Force decided to use the more inclusive Metro Denver Homeless Initiative (MDHI) definition of homeless in the WHIDS, which includes the following conditions affecting vulnerable individuals within the definition of homeless: sleeping in a shelter or place not meant for human habitation, such as cars, parks, or abandoned buildings; and living in transitional housing, such as a hotel, motel; or being "doubled up" at someone else's home with friends or family members. The main distinction between the two definitions is HUD does not consider living with family members as being homeless. The MDHI definition adopted by the Task Force is closer to the one used by the U.S. Department of Health and Human Services (HHS) and educational institutions.

According to a March 2015 article published by Colorado Municipal League titled, "Homelessness in Colorado," (the "CML Article") individuals without permanent housing are often transitioning out of jail, prison, halfway houses, foster care, hospital, detoxification centers or other residential programs.

¹ Center for Career & Community Enrichment ("3CE") is located at 7117 Federal Boulevard within the City. According to 3CE, it is an organization that aims to provide a "one-stop-shop" to access services and educational classes that support adults on their path to self-sufficiency. Classes include GED, ESL, Job Skills, Parenting, Building a Network, Anger Management, and others. 3CE is a collaborative effort among Low Income Family Empowerment, Adams County Housing Authority (which provides the building and staffing), Colorado State University Extension, Adams County Workforce & Business Center, ACCESS Housing, Growing Home, and Coal Creek Adult Education Center. Numerous other partners offer programs on a revolving basis.

They may be facing eviction from their permanent housing. This leads to loitering and congregating in public places due to a lack of a permanent residence. These unstable circumstances define homelessness in Colorado. See CML Article as **Attachment F** hereto.

The Most Vulnerable

Dr. Paul Koegel, one of the leading homeless researchers, identified a structural context to homelessness: "a growing pool of vulnerable poor people and a concomitant decline in the availability of low-cost housing." According to Koegel, the availability in low-cost housing decreased in the early 1970s and late 1980s, and the current economy is once again contributing to a decline in low-cost housing stock.

Beyond the overall market structure, Koegel – and many organizations serving the homeless population – have identified individual level factors that increase the risk of a person becoming homeless. These individual factors are discussed below.

Growing Home, a Westminster non-profit serving homeless families, reports many homeless individuals have experience as defendants in the justice system, which becomes a barrier to employment or receiving financing for housing. Criminal offenders are four to six times more likely to report an episode of homelessness than the general population. Another widely acknowledged vulnerable population is those with disabilities who may not have access to benefits, resulting in chronic homelessness. Some have untreated mental illnesses or substance addiction.

According to the CML Article, "veterans are becoming a significant part of the most vulnerable populations because of difficulties reintegrating into society. This may be due to post-traumatic stress disorder or a traumatic brain injury while on duty. Those physically disabled while in the military or suffering behavioral issues have trouble maintaining employment and stable housing. Veterans also may have difficulty getting services due to their discharge status or a simple lack of awareness that services exist." See Attachment F.

Homeless families are of particular concern as homelessness affects all members of the family, regardless of age, and has a direct tie to education. According to the Colorado Department of Education, during the 2011-2012 school year – the most recent data available – 23,680 children in 4,718 families are in a homeless situation across the state. Slightly over 79%, or 18,766, of these children were living in "doubled up" situations with extended families or friends.

Unlike individual homelessness, which can be easier to identify because the individuals congregate in parks and public spaces, family homelessness is much harder to track, especially in Westminster. They are not visible on the streets but also do not have the safety or security of a home of their own. Generally, the school districts have better statistics on homeless family populations as they are able to track the students' home situations through the schools. However, given that none of the three school districts serving Westminster serves only the City, it is impossible to say exactly how many homeless children there are in Westminster by using school district statistics.

The Westminster Situation

Initial data shows that Westminster's homeless population includes a fairly small number of the more traditionally classified solitary "unsheltered" people and a larger number of the "doubled up" families.

Conducted by the Metro Denver Homeless Initiative (MDHI), the 2014 national Point in Time (PIT) Survey results for Adams and Jefferson counties show that between both counties there were 1,143 individuals counted as homeless on a particular night. Undercounting is likely, particularly as those

not directly served by a homeless organization and those not visible in an unsheltered situation were not included. Homeless families who may be "doubled up" with extended family or friends were likely not counted. A one-page overview of each county's 2014 PIT Survey is attached. The Adams County PIT Survey results are Attachment C; the Jefferson County PIT Survey results are Attachment D.

In 2014 Westminster staff did not participate in the administration of the surveys, and it is unknown whether individuals within the City may have been counted as part of the survey effort. In January 2015, thanks largely to the creation of the Task Force, the Westminster Police Department and volunteers participated for the first time with MDHI in conducting the national PIT Surveys. Westminster Police Department obtained 20 completed surveys (13 males and 7 females), 85% of whom reported living outside of shelters. These figures will be included in the Adams County and Jefferson County 2015 PIT Survey totals. The full results were released June 5, 2015, and are accessible via a link included in Attachment B.

Beyond the 2015 PIT Survey, between September 1, 2014, and June 30, 2015, Westminster Police Department officers contacted 234 individuals for non-criminal field contacts who identified themselves as being homeless.² The contacts were analyzed as follows.

Within this period, if a homeless person was contacted only once by law enforcement, he or she was considered to be transient, meaning he or she did not remain for any significant time within the City and was just passing through. The converse is also true: an individual contacted more than once within this period likely had a longer stay within the City. Only 30 of these people were contacted more than once within this period, suggesting the core population of homeless within the City is at or about 30 individuals.

Of these 30 people, Westminster Police Department was able to determine that 29 of them had criminal histories and two were registered sex offenders. Westminster Police Department records indicate there were seven mental health holds imposed on individuals within this core population of homeless between September 1, 2014 and January 31, 2015.

Also within the nine-month period of September to June, Westminster Police Department worked 23 criminal cases involving homeless suspects; three were bank robberies and one was an aggravated robbery.

Contacts with homeless individuals at the Irving Street Library and Park made up 45.79% of the total 234 non-criminal field contacts with homeless individuals during this period. Contacts with homeless individuals involving businesses along 72nd Avenue comprised another 15.79% of the 234 total non-criminal field contacts with homeless individuals.

Given these statistics and also first-hand experience, the Task Force initially assumed homeless issues were somewhat limited to the area around 72nd Avenue and Irving Street, including the Irving Street Library and Park, the MAC and the Westminster Plaza Shopping Center.³ Yet, mapping the location

² The self-identified "homeless" category in non-criminal field reports was added by the Westminster Police Department in September 2014 in response to the uptick in visible homeless activity within the City and as a way to help track and understand the emerging Homeless Issue. Prior to this date, the statistic on how many non-criminal field contacts were made with a self-identified homeless person is not available.

³ The Task Force would like to note that, given the current concentration of Homeless Issues in the southern part of the City, it is likely the Westminster Station/Transit Oriented Development ("TOD"), including the expanded and improved Little Dry Creek Park, located in the southern portion of the City, will face issues similar to what are being experienced elsewhere in south Westminster.

of these 190 non-criminal field contacts reveal it to be a citywide issue, albeit with a concentration in the southern portion of the City. **See Attachment E**.

Police

The first-hand experiences of officers within the Westminster Police Department illustrate the foregoing statistics and confirm the nature of the City's 30 or so core homeless population. According to officers, the term "shelter resistant" describes the City's core homeless population. Of the 30 individuals contacted more than once in the September to June period, none was interested in social services, housing placement, mental health services, or relocation. Officers confirm that some individuals did take food from food banks and accept free lunches or dinners from the churches, and a few were willing to participate in the Center for Career & Community Enrichment (3CE) job placement services offered. (See footnote 3 above).

In general, the homeless individuals the Westminster Police routinely encounter are the City's 30 or so core homeless individuals who are no longer willing to participate in the shelter programs, many times because of the stringent rules imposed by the shelter, such as prohibitions against drugs or alcohol use. These individuals have been found camping in tents in open spaces in sub-zero weather, trespassing in boiler room buildings in apartment complexes, in abandoned houses or businesses, and on street corners.

Officers report encountering only two homeless families in the past year. Those families were on the street temporarily due to divorce, domestic violence and financial situations, and the Westminster Police Department provided those families with immediate access to the resources they needed for assistance.

Fire

The Westminster Fire Department mined its records in an effort to quantify the number of calls for service from homeless individuals it received during a similar four-month period, from October 1, 2014 to January 31, 2015. Within that time, the Westminster Fire Department received 46 medical calls on homeless individuals and transported 43 of them to a local hospital. The breakdown is as follows:

Month	Number of Calls	Number of Transports	Call Time in Hours
Oct 2014	11	9	5.76
Nov 2014	10	10	5.71
Dec 2014	11	10	7.75
Jan 2015	14	14	9
Total	46	43	28.22
Estimated Cost		\$31,175	\$3,737.17

As a rough estimate of costs associated with these calls, the following calculations were made. The total estimated personnel cost for these calls is estimated to be \$3,737.17 (\$132.43 combined hourly rate times 28.22 hours). A majority of the calls were for basic life support and were billed at \$725 per ambulance transport, meaning over this period ambulance billing totaled \$31,175 for these calls. Thus, the total cost of providing medical calls on homeless individuals during this four-month period is roughly \$35,000, which could translate into a cost of about \$105,000 over a year not collected. This estimate is conservative in that it does not include mileage costs, fuel/idling costs, or vehicle wear and tear. It also does not include the cost of Westminster Police Department personnel who accompanied the Fire Department on many of these calls due to dangerous or remote locations.

Parks, Recreation and Libraries

The longest-term staff members with 24 years and more employment with the Library Division report there have always been homeless individuals and families served by the Westminster Public Library. In 2008, to make it easier to serve these patrons, library staff compiled a list of community resources to serve those in need, whether homeless or not. Library staff update this list annually, making it available on the Research pages of the library website and printing it out free of charge when needed. Library staff members are adept at assisting patrons in finding the local resources they need, consider it part of their jobs, and largely value this opportunity to help others in need.

Irving Street Library and Park

From staff's perspective, the Irving Street Library and Park is ground zero for disruptive behavior related to homeless issues at City facilities. From November 2014, when staff began better documenting incidents within the libraries, to April 30, 2015, staff reported 40 behavioral issues at the park or library. During this six-month period, police were called 18 times, either because the behavior was illegal or because an individual failed to follow library staff directions, often becoming belligerent toward staff and other patrons. In January alone, there were 12 such incidents, three involving police. The number of calls for police service in this six-month period far exceeds what has typically been experienced in a full year.

It is important to note that not all incidents are documented and that staff cannot be certain whether an incident involves a homeless person or not. If a group of people is being loud or using offensive language but immediately change their behavior when staff ask or self-regulate, nothing is recorded.

Within the last year or so, library staff has noted a change in the form of a significant increase in the number of negative behaviors - demonstrated by a small percentage of the patrons - that are greatly affecting the library experience of others within the facility. Since April 2014, there have been eight (8) written complaints by patrons to staff about both the appearance and the behavior of some the individuals presumed to be homeless who are frequenting the libraries. Within that same time period, there have been almost hourly complaints made to staff verbally.

At Irving Street Library, many of the complaints are broader than library behavior and include comments about the conduct of homeless individuals in the adjacent park, which has included yelling at children on the playground. Many of these patrons report they are afraid to visit the libraries and will no longer bring their children. There is statistical support for this: Story time attendance at Irving Street Library fell by 483 people or a 6.6% decline in 2014 from 2013 while all other program attendance saw an increase at both libraries.

The recorded incidents at the park and library include intoxication, drug overdoses, yelling, fighting, repeatedly leaving personal belongings in areas obstructing passage, changing clothes in front of bathroom sinks, or attempting to bathe in the library sinks. Both of the latter practices are problematic for two reasons – the sinks are only designed for hand washing and more extensive bathing causes clogged pipes, and both activities carry with them a risk of indecent exposure.

On one notable occasion, people were asked to leave the library because they were giving one another haircuts in the bathroom. They were first required to clean up after themselves. In March 2015, a homeless individual was arrested after knives were found in a bag he was carrying after another patron reported he was unstable. He was an unemployed chef who had recently become homeless. This situation caused alarm among both patrons and staff members.

College Hill Library

The perception is that College Hill Library does not experience homeless behavioral issues. Yet, as long ago as September 2009, a homeless woman was living in the College Hill Library emergency staircase. She would hide out at closing, roam the library and steal from the collection to pawn materials the next day. Because of that experience, Front Range Community College campus security and library staff put additional security measures into effect.

In April 2015, a homeless man smashed a window to get into the College Hill Library in the middle of the night. He was found sleeping in the library when staff arrived the next morning. He admitted he was high on methamphetamine and could not remember how he got there. The next full business day, an upstairs sink clogged with what appeared to be a full beard's worth of hair, perhaps shaven off by the homeless man. The sink was located in the only upstairs bathroom accessible to those in a wheelchair, and, as a result the bathroom was out of service for an entire day until the plumbing repair was complete.

These anecdotes serve to illustrate that both libraries have been dealing with the impact of homeless issues for quite some time. Aside from these extreme examples, there are also more common cases, often tied to intoxication or substance abuse, where a likely homeless patron's behavior negatively affects others visiting the library. There have also been formal complaints filed about the odor of some individuals, most of them homeless.

At other Parks, Recreation and Libraries facilities, the impact of the homeless issue are less defined. For instance, during the summer 2014 season, the Standley Lake staff reported a new trend: a number of families stayed for the maximum number of 14 nights possible under park regulations, left for a night to restart the clock, and then returned for another extended stay. These families adhered to park rules and regulations, and it is only conjecture to guess that they were otherwise homeless. They were all paying customers.

A separate trend emerged toward the end of the 2014 Standley Lake camping season, which may or may not be attributable to homelessness. There was an increase in the number of behavioral issues, including fights requiring staff intervention in order to ensure that the experience of other campers remained positive. Largely, these instances involved groups of people who were not related to one another in which various individuals would rotate into and out of a camp over the allotted period. Disagreements between one person in the group and others within the same campsite would occasionally become loud and disruptive. Unfortunately, the same types of behavioral issues, only worsening, are being seen during the 2015 camping season.

The MAC also reports impacts that cannot be definitely tied to homeless patrons. In 2014 there was an increase in the number of individuals paying to simply shower at the MAC. Staff reports that often the showers were left in such poor condition that the next guest attempting to shower after a workout complained. Extra custodial attention is now frequently required in order to ensure a positive experience for all guests.

It would be remiss not to mention the great unknown: the future development of the commuter rail station and park in south Westminster as well as the new downtown may serve as magnets for the homeless community. Already, there are many camps around the transit-oriented development location. With increased ease of transportation, excellent location, the park sites, the lake and other public amenities being added, these areas may become less desirable to other development if the status quo is maintained.

RECOMMENDATIONS

The Task Force's efforts to date have resulted in hours of meeting and reading and are culminating in this WHIDS, by which the Task Force is setting forth its initial recommendations to Council. The Task Force would like to stress that these recommendations are preliminary and should be refined to meet Council's policy goals. It will be critical to address regional concerns on a regional basis, asking who the key stakeholders are on any given aspect of these issues. The Task Force has attempted a balanced approach to these difficult and complex homeless issues and respects that City Councillors may have strong feelings on one side or the other of the debate that surrounds homeless issues.

It is also important to stress that communication on this topic, both on the broader issue and on specific approaches to deal with it, is vital to the success of any recommendations. The Task Force recognizes that the City will need to communicate any new approaches via policies or practices to a wide array of community stakeholders, including the homeless community.

In the same vein the Task Force recommends that the City enhance its communication surrounding community resources available to those in need of homeless services. As noted previously, the libraries staff keeps an updated list of resources that are available to those in need, but the scope of the information and its potential distribution could be expanded. The Police Department and other City programs and services could make use of a compact brochure to provide to individuals in need.

1. New Staff or Volunteer Position.

Much of what the Task Force has studied focused on the resources already available from a variety of non-profits and government agencies, which are significant. Yet, knowing where and how to access these services is confusing. We can only imagine the confusion one in need of this assistance must feel. The Task Force also feels as the homeless issue emerges and gains strength locally it will be important to have a single point-person within the City to be aware of other City's efforts, to be seated at the table when grant discussions come up, and to be a liaison between and among local businesses, non-profits and the homeless themselves. The Task Force is therefore recommending the creation of a new staff or volunteer position to champion homeless issues within the City and to serve as a resource for citizens and City staff.

This staff or volunteer person would serve as a common point of contact between the City staff and other organizations serving the homeless, especially with an eye toward ensuring that the City receives its appropriate allocation of limited resources in the region. As long as Westminster does not provide ongoing advocacy for its share of funding, it will continue to be marginalized in its efforts to access regional services in this area. In addition to working with regional partners, the position would be responsible for coordinating with others within the City who work directly with the homeless or those vulnerable to becoming homeless. If a staff position, funding this new position is the most expensive part of the Task Force's recommendation. While the exact cost depends upon where within the City's personnel structure the position is classified and whether it is funded as a full or part-time position, as a rough estimate the Task Force believes a \$75,000 annual salary is likely a reasonable estimate, with additional costs for benefits and other expenses projected at \$25,000-\$50,000.

This position could also create or facilitate a more permanent City-led homeless coalition (see below) that includes citizen representatives to continue to evaluate, monitor and make recommendations about how to best serve the homeless population within the City.

2. Homeless Coalition.

The Task Force suggests the formation of a coalition to be led by the City and to be comprised of area stakeholders, citizen groups, private service organizations, public agencies, and those most knowledgeable about homelessness to gain yet a better understanding of the complex causes and effects of the homeless issue within our City.

The Homeless Initiative Task Force, this WHIDS and the recommendations set forth herein support several of the City's Strategic Plan Goals, including Visionary Leadership and Effective Governance; Vibrant, Inclusive and Engaged Neighborhoods; and Beautiful, Desirable, Safe and Environmentally Responsible City.

3. Westminster Policy and Westminster Municipal Code Changes

Most readily available, but not without risk, is to consider revisions to the policies and City Code to more effectively address the new reality of homeless issues. These policies and practices would provide more tools and more consistent messaging necessary to address disruptive and behavioral issues in public facilities, parks and open space properties. This recommendation includes, but is not limited to, enacting Code revisions to provide first responders with stronger tools, such as an anticamping ordinance, to more effectively address disruptive behavior. These changes would be meant to ensure that all citizens and visitors to the City of Westminster are safe and continue to have the right to use public spaces responsibly without infringing on the rights of others to do the same.

The Task Force is also suggesting potential policy changes that would not require formal adoption of an ordinance but may require a change in administrative practice, department priorities, and budgets.

- Affordable Housing. The research supports and the Task Force believes the City needs to be a part of a broader partnership that works toward a goal of attaining an adequate amount of affordable housing available within the City to prevent individuals and families from becoming homeless. If the worst happens to a family resulting in a loss of income, there should be affordable housing available to our citizens and resources identified and available to support the affected individuals and families.
- Better Stewardship. The City from time to time owns commercial buildings and private homes acquired through land or easement purchases for various temporary or long-term purposes. These properties are mostly unoccupied and are, therefore, subject to vandalism and unauthorized access, including squatting, which results in citizen complaints and ongoing repair issues. The Task Force recommends use of funds to properly maintain and secure these buildings or to have them demolished in a timely manner.
- Signage. Install signs at all City-owned but unused or abandoned properties with a phone number and web contact to make it as easy as possible for citizens to report a problem they note occurring on a City-owned property.
- Partner Against Trespassing. Launch a City policy to aggressively work with private property owners of vacant properties to post "no trespassing" signs and to obtain written permission from owners or managers to allow the Westminster Police Department to act as agents to warn trespassers, to move them along, and, if necessary, to issues citations or make arrests on such property for trespassing.

- Update current Parks, Recreation and Libraries rules and policies, including facility standards of conduct and parks regulations, to maximize staff authority and discretion while also confirming compliance with all legal requirements.
- Revise library policies to allow the libraries to issue use denial letters for a period of time, effectively trespassing individuals who repeatedly violate the same standards of acceptable behavior. This would bring the practice of the Westminster Public Libraries in alignment with all other metro area public libraries.
- Uniformed Library Security. Like many other urban libraries, including in Aurora, Boulder, and Denver, libraries would like to consider bringing in uniformed security presence into the Irving Street Library during business hours. This security presence could be either private or public (off-duty police officers). The shifts the officers work will vary from day to day. The officers would not immediately enforce library standards of acceptable behavior, except when it rises to an illegal level. Instead, they will provide a security presence for the overwhelming majority of patrons who behave acceptably but have been feeling fear when visiting the library. Security officers will also serve as back-up to library staff as they address patrons who have are refusing to comply with acceptable standards of behavior. Because Front Range Community College does provide College Hill Library with uniformed security presence, at this time, this change will only be needed at Irving Street. The specific cost for this security has not been calculated, but it will likely be in excess of \$100,000.
- Collect Statistics. Continue and expand efforts to document contacts with homeless, to understand the needs of homeless, and to determine the ways in which the homeless issue impacts the City's citizens and the City's delivery of services. This means, among other things, continuing to participate in PIT Survey.
- Pursue a partnership with Volunteers of America, which has already been discussed, that would include hosting a representative from Volunteers of America at the Irving Street Library on a monthly basis to administer the VI-SPDAT⁴ to homeless individuals.

Given that a subset of homeless individuals are also dealing with mental illness, there is a common misperception that establishing boundaries and consequences for this population is unfair. Yet, according to the National Alliance on Mental Illness (NAMI), establishing boundaries and enforcing consequences when boundaries are violated actually has a positive effect on most, reinforcing the importance of complying with whatever treatment protocol is best suited to the individual.

A key assumption in this recommendation is that these proposed ordinances would be legally defensible, respectful of individual rights, and would synthesize and apply current "best practices" on the topics. Other communities have taken similar approaches but with varying results. Specific items for consideration include the following:

- Panhandling – Soliciting. Updating current ordinances on panhandling and soliciting, specifically as they apply to certain geographic areas, such as the Westminster Station TOD. Specific provisions that may need review and improvement are W.M.C. § 9-4-1, "Solicitation on or near a street or

⁴ The VI-SPDAT (the Vulnerability Index-Service Prioritization Decision Assistance Tool) is an intake tool used by social service providers to determine a person's eligibility for housing aid. It is is designed to help housing providers access the full range of housing interventions across their entire homeless population, including, but not limited to, permanent supportive housing for the most vulnerable, chronically homeless individuals.

highway," and W.M.C. §13-1-3 (C), which prohibits sales, distribution or solicitation of materials within parks.

- Sit Lie. A potential new ordinance on "Obstructing Public Right of Way" could be considered and would be specifically designed to prohibit sitting or lying on sidewalks and common pedestrian areas. Even if not adopted city-wide, this tool could be critical for the success of targeted places within the City, such as Westminster Station TOD or the new downtown. Colorado Springs and Denver have recent experience in this realm of legislation, with mixed success.
- No Camping. Create a "No Camping" ordinance modeled after several Colorado cities that have adopted such ordinances which have withstood public and court challenges while still allowing camping at Standley Lake Park. This would allow City staff to address behavioral issues resulting from those in the community who are chronically homeless, refuse further assistance or, by their abuse of public property, degrade the quality of the City's public parks, open space and facilities.
- Removal and Possession. Enact an ordinance enhancing authority to remove homeless camps from public property following proper notice. This authority already exists for use in emergencies when a public nuisance requires summary abatement in order to prevent the risk of imminent danger of serious injury. The intent of this program would be to establish a streamlined yet legal process to reduce the re-occupation of camps by other transient populations before they reach the level of an emergency public nuisance and to remove unsafe debris from public property in a timely manner. Similarly, grant broader Code authority for removal of abandoned personal property on City-owned property. City removal would only occur after giving proper notice. Even after proper notice, on a case by case basis, there may be occasions for personal property to be collected and stored. Notice would be posted at the site for the owner to collect this property within a designated timeframe at a designated city facility. This policy would dovetail with the no camping ordinance and the removal of homeless camps.

Respectfully submitted,

THE INFORMATION YOU NEED TO SERVE YOUR MUNICIPALITY AND RESIDENTS

The Knowledge Now series features practical research on timely topics from the Colorado Municipal League.

HOMELESSNESS IN COLORADO

By Meghan Dollar, CML legislative & policy advocate

This information is of a general nature and should not be interpreted as legal advice. Local facts determine what laws may apply and how, so you should always consult your municipal attorney before proceeding.

PICTURE OF THE PROBLEM

Homelessness Defined

Homelessness can be defined in many different ways. The U.S. Department of Housing and Urban Development has a specific definition, as do other national agencies that provide homelessness services.

This KnowledgeNow uses the definition of the Metro Denver Homeless Initiative,¹ which provides the following conditions affecting vulnerable individuals that must be addressed to end homelessness: Sleeping in a shelter or place not meant for human habitation (i.e., cars, parks, or abandoned buildings). This also means living in transitional housing, including a hotel, motel, or with family members.

Individuals without permanent housing are often transitioning out of jail, prison, halfway house, foster care, hospital, detox, or other residential program. They may be facing eviction from their permanent housing. This leads to loitering and congregating in public places due to a lack of a permanent residence. These unstable circumstances define homelessness in Colorado.

Individuals

Homeless individuals have a range of backgrounds. Many have experience in the justice system that becomes a barrier to employment. Offenders are four to six times more likely to report an

1 Sanford, Gary. Metro Denver Homeless Initiative. "Collaborations to Address Housing Instability and Homelessness." Denver. 1 October 2014. Lecture

episode of homelessness than the general population.²

A disabled population that may not have access to needs and benefits also can result in chronic homelessness. Some have untreated mental illnesses or substance addiction.

Homeless individuals also include senior citizens. With Colorado's aging population, this number continues to grow. These individuals have significant barriers to gaining employment and housing. With the lack of affordable housing and increased costs of living, some seniors find themselves unable to find suitable shelter and stability.

Veterans

Veterans are a significant part of our most vulnerable populations because of difficulties reintegrating into society. This may be due to post traumatic stress disorder (PTSD) or a traumatic brain injury while on duty. Those physically disabled while in the military or suffering from behavioral issues have trouble maintaining employment and stable housing. Veterans also may have

2 Greenberg, G. A., & Rosenheck, R. A. (2008). Homelessness in the state and federal prison population. Criminal Behavior and Mental Health, 18, 88-103 difficulty getting services due to their discharge status or a simple lack of awareness that services exist. This population is often thought of as prominently male, but female veterans from Iraq and Afghanistan also find themselves homeless. In 2012, the State of Colorado estimated that there are between 3,000 and 5,000 veterans in Colorado who are, or at-risk of becoming, homeless.³

Families

While there are certainly a large number of homeless individuals in Colorado, what is particularly concerning is how many are members of families.

According to the Colorado Department of Education, there are 4,718 children and their families who are living in shelters, motels, or other homeless situations. There are another 17,297 who are living in doubled-up situations, where they are staying with extended family.

This systemic issue in a family can lead to food insecurity, weaker social networks, issues in school, and significant health problems. If a family has experienced domestic violence, the likelihood of anxiety and depression in the children is increased. This requires services beyond food and shelter, and creates a need for behavioral assistance.

KNOWLEDGE NOW 1

STATE RESOURCES TO END HOMELESSNESS

Pathways Home Colorado

Created by Gov. John Hickenlooper's Office and the Colorado Division of Housing, Pathways Home Colorado promotes collaboration between business, faith, individual, and foundation partners to ensure that state resources are effectively directed to projects that have proven success in eliminating barriers to housing and services. Pathways Home Colorado is part of Colorado's ongoing efforts to replicate best practice models, support regional priorities and become more strategic in preventing and ending homelessness.

The program has existed since 2012 and is a terrific opportunity for local governments to look at resources and data regarding homelessness.

Colorado Counts, a section of Pathways Home Colorado's plan, is gathering information from six regions throughout the state: Mesa County, Five County Southwest Region (Archuleta, Delores, La Plata, Montezuma and San Juan Counties), Tri-County Region (Eagle, Garfield, and Pitkin Counties), El Paso County, Pueblo County, and Metropolitan Denver. Colorado Counts is utilizing trained community volunteers to actively seek out and survey those who are, or at risk of becoming, homeless. The hope is to understand the housing and health needs and plan accordingly. Where this may really make a difference is connecting those identified as most vulnerable to needed services within their communities. From 2010 to the present, 3,813 individuals have been surveyed.

Pathways Home Colorado set strict goals in 2012 to establish collaborative partnerships, create effective policies, prioritize resources, and engage political leadership to help solve the issue of homelessness. By working with state, local, and federal stakeholders, several goals were reached since its inception. These include establishing development projects with 848 units for the homeless and special needs population. Additionally, with help from the Division of Housing, there was an increased availability of \$100,000 in tax check-off funds for homeless prevention activity programs around the state.

For more information on Pathways Home Colorado, visit www.colorado.gov/cs/Satellite/DOLA-Main/CBON/1251611679326.

Fort Lyon

When the U.S. Department of Veterans Affairs opted to no longer use Fort Lyon as a hospital, the State of Colorado took the campus to use as a prison. Due to budget cuts, the prison was shut down in 2012, and a vacant campus was left unused and a community left without jobs. It was then that the Office of the Governor, in partnership with the Department of Local Affairs, began working to repurpose the building into a treatment, job training, and overall transition facility for the homeless.

One of the most difficult issues when trying to combat homelessness is getting that vulnerable population to services. The proponents' goal was to provide housing and services under the same roof. The League supported this move and worked to approve the use in the 2013 legislative session.

The campus is primarily run by the Colorado Coalition for the Homeless with workers also employed by Bent County. Many residents of the community also have worked to improve Fort Lyon.

As of August 2014, the campus is home to 202 residents, 11 who have since graduated the program and reentered their communities.² The facility still maintains a goal of running at capacity by July 2015 with 300 residents. While Fort Lyon as a homeless facility is still in the early stages, many believe it is possible that it could be a lasting solution for homelessness in Colorado.

For more information on Fort Lyon, visit www.coloradocoalition.org.

¹ State of Colorado, Office of the Governor, Pathways Home Colorado Report, 2.

2

² McGhee, Tom, "Controversial Fort Lyon homeless facility sends alums into world," *Denver Post*. Aug. 20, 2014. www.denverpost.com/news/ci_26368473/controversial-fort-lyon-homeless-facility-sends-alums-into. Accessed Nov. 1, 2014.

MUNICIPALITIES ENDING THE CYCLE OF HOMELESSNESS

It has been proven time and again that the money spent on sufficient housing to prevent homelessness is much less than the costs associated with existing homeless citizens. Occurrences like nuisance violations, healthcare costs, and jail add up to millions a year spent by municipalities on homeless individuals, with \$11 million spent each year in Denver alone. That is why municipalities are turning to ways to target their vulnerable populations before they become homeless.

Metro Denver

A new focus on homelessness that promotes regional collaborations to increase housing resources and house the most vulnerable plays a large role in metro Denver's homelessness programs. The Metro Denver Homeless Imitative and Denver's Road Home are two important partners moving forward with regional collaboration.

In the metropolitan area, mental illness is a huge factor leading to chronic homelessness. Data collected by the Metro Denver Homeless Initiative's annual point-in-time report show that, as of 2014, 35 percent of homeless individuals identified themselves as having a mental illness.⁵ The most vulnerable must be targeted beyond permanent housing. Individual services for behavioral health, substance abuse, or physical health treatment are imperative to end the cycle of homelessness.

The City of Denver spends an average of \$37,846 per individual in back-end costs for the homeless (jail, court costs, emergency room visits, and detox). By putting service programs in place up front, a city can save thousands of dollars. For example, Portland, Ore., reduced the costs of health care and incarcerations from \$42,075 to \$17,199 by implementing permanent supportive housing. Denver hopes to see similar cost savings as it continues to roll out its 10-year plan against homelessness.

4 Sanford, Gary. Metro Denver Homeless Initiative. "Collaborations to Address Housing Instability and Homelessness." Denver, CO. 1 October 2014. Lecture

The City of Denver is now looking at a new option for funding chronically homeless individuals using a social impact bond (SIB) to support a broader city homelessness strategy. An SIB is a specific type of social impact financing in which funds are raised from investors to provide social service provider(s) with the working capital to deliver their services. The intent is to incentivize investors by showing positive outcomes while allowing public money to go farther. What this program could do is allow the city to pay for new programs and services while it moves toward long-term preventative solutions by adding dollars to existing resources and tools to make them more effective.6

For more information, contact Gary Sanford, Metro Denver Homelessness Initiative executive director, at gary.sanford@unitedwaydenver.org, or Bennie Milliner, Denver's Road Home executive director, at bennie.milliner@denvergov.org

Montrose

To end the cycle of homelessness, it must be a priority in the community. The City of Montrose is an excellent example. Since 2012, the community has come together to form a strategic plan targeted at ending homelessness. In 2014, Montrose focused its community nonprofit funding assistance on the issue of housing and homelessness.

The Montrose Community Foundation initiated community forums and the development of an organized coalition to support the community in its focus on providing housing; this became the Montrose County Coalition on Homelessness. Each member of the coalition provided services to the homeless populations including food, shelter, and reintegration. By coming together and assessing their resources, the coalition was able to achieve new goals for their community.

From 2013-2014, the community:

- created a single-point entry for all of the homeless or near homeless in Montrose County;
- 6 Milliner, Bennie. Denver's Road Home. "Collaborations to Address Housing Instability and Homelessness." Denver, CO. 1 October 2014. Lecture

- became part of the Fort Lyon referral network to ensure the chronically homeless with mental health and substance use are receiving the life change they are seeking;
- asked for and received veteran dollars for clothing, work tools, and housing support.
- received 14 Housing & Urban Development (HUD)-Veterans Affairs Supportive Housing (VASH) vouchers for veterans in need of permanent housing; and
- trained churches on "one congregation, one family," a program that pairs mentors from religious congregations, community organizations, and businesses with families and seniors experiencing housing instability.

Into 2015, the organization hopes to further its goals by providing necessary transportation for the homeless and more funding for transitional housing. Reintegration for those citizens coming out of Fort Lyon is also a focus for the community.

For more information, contact William Bell, Montrose city manager, at wbell@ci.montrose.co.us, or Kaye Hotsenpiller, Montrose County Coalition on Homelessness chair, at kayeh@htop.org.

Fort Collins

In 2011, Homeward 2020, a community initiative to make homelessness rare, short-lived, and non-recurring, was created in Fort Collins. The initiative is guided by a volunteer board composed of housing and service providers, advocates, business representatives, individuals with personal experiences of homelessness, law enforcement, and representatives from the City of Fort Collins. The Community Foundation of Northern Colorado serves as the fiscal agent for the initiative. The goal of Homeward 2020 is stable housing for all Fort Collins' citizens experiencing homelessness. In the 10-year plan, specific goals were developed.

 This vital need will be met while acknowledging that there are many support services and case management needed to be available to complement the housing.

⁵ Brown, Jennifer. "Breakdown: Mental Health in Colorado Part Three of Four." Denver Post 25 Nov. 2014: 1+. Print.

- As much as is possible, the housing process should be simplified and streamlined to decrease the amount of time it takes to help someone move into housing. The availability of affordable and supportive housing also impacts this timeline.
- The available housing must be accompanied with necessary transportation, support services, and case management so that their unique needs are being properly and humanely addressed.
- The Homeward 2020 Ten Year
 Plan to Make Homelessness Rare,
 Short-Lived, and Non-Recurring will
 provide alignment, coordination, and
 strategic development around Fort
 Collins's agencies to provide rapid
 response housing and the full range
 services for all members of its
 community that become or are
 about to become homeless.

The initiative convenes community conversations on homelessness and advocates for research- and evidence-based solution. It also just completed a 2015 Point-in-Time survey. This is data collected on individuals in a given time-frame in a community. The survey helps to assess the need for specific services and where resources should be placed.

For more information, contact Vanessa Fenley, Homeward 2020 director, at vanessa@homeward2020.org.

Rural Homeless Programs

Colorado Coalition for the Homeless

Colorado Coalition for the Homeless is a leading partner in the fight against homelessness. While it works in more urban areas, the organization also is working on programs outside of the metro area. The coalition's Rural Initiatives Program has brought together 14 service providers in the state and operates 12 transitional housing programs, one permanent supportive housing program, and one supportive services program. Yet again, there is a forward focus on collaborations within the community. In 2013 alone, 139 families gained transitional and

permanent housing through the program.⁷

Organizations partnering with the Rural Initiatives Program come from all over Colorado. In Canon City, the program partners with Loaves and Fishes Ministry, providing goods, services, and temporary housing to homeless in Fremont County.

In Avon, the coalition partners with the Bright Future Foundation, a nonprofit that provides services to individuals and families affected by domestic violence.

In Alamosa, the coalition works with Lapuente Home Inc., which serves the San Luis Valley by providing food, shelter, and other resources to homeless in crisis.

These are just a few examples of partnerships throughout rural Colorado. The vastness of the homeless problem in Colorado lends itself to partnerships. Cities and towns do not have to go it alone, but, instead, can look to neighboring communities and nonprofits to create long-term solutions to house their most vulnerable population.

^{7 &}quot;What We Do: Rural Programs." Colorado Coalition for the Homeless. N.p., 12 Nov. 2014. Web. 25 Nov. 2014.

Staff Report

City Council Study Session Meeting January 4, 2016

SUBJECT: Proposed 2016 Citizen Survey

PREPARED BY: Ben Goldstein, Senior Management Analyst

Recommended City Council Action

Review the attached proposed 2016 Citizen Survey draft and provide feedback to Staff at the December 28th Study Session Meeting. City Staff and representatives from National Research Center, Inc. (NRC), the survey consultant, will be available that evening to discuss City Council's feedback.

Summary Statement

Staff is proposing to conduct the Biennial Citizen Survey for the 12th consecutive time. A draft of the proposed 2016 Citizen Survey is attached for Council's review. This is intended to be an opportunity for Council to voice any concerns and make suggestions for changes to the proposed survey questions and survey format.

Staff would particularly like feedback on the proposed questions in the "Planning" section of the survey, historically questions 19 through 22. Staff has included a list of possible questions for this section based on feedback received from City Council and City departments. This section is used to address policy questions that are more specific to Westminster's current issues or to gather information regarding items that are of interest to City Council. Questions 1 through 18 are used to gather both trend and comparative data, and remain relatively unchanged from year to year.

Expenditure Required: \$23,792 for services provided by NRC, including printing and postage

Source of Funds: General Fund - Central Charges operating budget

Staff Report – Proposed 2016 Citizen Survey January 4, 2016 Page 2

Policy Issue

Does City Council want to conduct a mail survey in 2016? Does City Council concur with the basic format and proposed questions?

Alternatives

There are several alternatives available to City Council for the proposed 2016 Biennial Citizen Survey. The most sweeping alternative would be to not conduct a survey in 2016. Staff does not recommend this alternative because the data received from past surveys has proven valuable in policy discussions for City Council and has been used as a decision making tool by Staff.

Some other alternatives are making significant changes to the proposed questions, survey format, or conducting the survey via telephone interviews. Staff welcomes City Council input on the questions asked, but recommends against major changes to the survey as it has provided the City with valuable trend data for over two decades. Staff does not recommend switching the administration of the survey to telephone interviews, as it may negatively impact the response rate and increase the cost.

Background Information

Every two years for the last 22 years, the City has conducted a citizen survey to measure residents' satisfaction level with City services and gather opinions on specific policy questions. The data gathered from past surveys has been used by both Staff and City Council as a tool to assist with decision making and help guide policy direction. Additionally, departments regularly use data gathered in the survey as part of their performance measurements.

As in previous years, the City has contracted with the National Research Center, Inc., (NRC) to conduct the survey. NRC is widely known throughout the United States as a preeminent citizen survey consulting firm. They are a highly skilled team of social science and public attitude researchers performing a full range of quality research to help organizations measure their effectiveness and understand the perspectives of their residents. Their principals have worked more than twenty years measuring client needs and organizational performance in critical areas such as behavioral health, client satisfaction, local government service provision, special needs human services and more. NRC staff members have authored numerous articles about research and evaluation findings and methodology in journals and books and are frequent presenters for the American Evaluation Association, International City/County Management Association, and the National League of Cities. Additionally, NRC developed the national citizen survey instrument that is endorsed by the International City/County Management Association (ICMA).

To ensure that the City of Westminster was utilizing the highest quality firm at the most competitive pricing, the City conducted an Request For Proposals (RFP) in late 2011 to select a vendor for the 2012 Biennial Citizen Survey, with an option for the City to use the vendor for the 2014 and 2016 Surveys; the City selected NRC for the 2012 survey. The City has elected to exercise its contract option and selected NRC to conduct the 2016 Survey. NRC was selected based on their ability to provide excellent customer service, comparative data, and affordability. Because NRC conducts surveys both throughout Colorado and nationally, they are able to provide excellent comparative data on many of the standard questions included in the City's survey.

As in previous years, City Manager's Office Staff sought possible questions from all departments for the 2016 survey. The 2016 survey instrument was designed to collect year-to-year trend information

Staff Report – Proposed 2016 Citizen Survey January 4, 2016 Page 3

and gather data on current issues. The 2016 survey poses many questions that are specifically designed to gather performance measurement data for the City's internal performance measurement program. Staff is working concurrently with City Council review to refine word choice, layout, page length and readability and to make other minor changes.

The questions and response sets were designed by NRC to promote scientific validity.

- Questions 1-5 are designed to assess the quality of the community, and are largely unchanged from the last survey, with the exception of question 3, which has been modified to reflect the change in City Council's Strategic Plan goals.
- Questions 6-12 assess the quality of service and are generally unchanged from the 2014 survey. With a substitution in questions 12 from "Rundown buildings" for "Availability of recreation facilities."
- Questions 13-18 assess communication with citizens and were modified to reflect a changing media landscape. This is most apparent with the modification of question 15, which will now more accurately assess what specific social media sites are used by respondents, not just if they are using them.
- Planning section A list of possible questions for this section have been included as a separate attachment to this Staff Report. The questions were developed based on feedback received from City Council and Staff.
- Questions D1-D13 ask each respondent to provide basic demographic information. This section
 largely reflects questions and terms used in the United States Census. This year's survey again
 asks residents to indicate their home zip code. This piece of information will help NRC and City
 Staff cross-tabulate results and gain a better understanding of how residents' views compare
 across the City.

The statistically valid survey will be mailed to a random sample of 3,000 residents. A pre-notification postcard will be mailed to the randomly selected residents on January 20. The first wave of surveys will be mailed on January 25 and the second wave will be mailed on January 28. The post card and both waves will be sent to the same 3,000 residents. Residents who receive the surveys will be asked to complete the survey only one time. The surveys will be sent in equal numbers to residents in the City's three school districts. The two waves of mailings help to ensure a response rate that provides statistically valid response data. Each wave will include a postage-paid return envelope addressed to the National Research Center, Inc. Residents will use the envelope to submit their completed surveys directly to the consultant. Additionally, this year residents will have the option to complete their survey online, with a website address provided for their unique area. Past experience by the vendor has shown that residents will largely choose the paper format, and will only complete one survey. However, should a resident choose to ignore the instructions to only complete one survey, the vendor has analytics tools in place to screen for duplicates or fraudulent surveys. As confidentiality is important to all respondents, regardless of what format they choose to respond with, a cover letter accompanying the survey states very clearly that every response will be kept confidential.

On March 18, Staff expects to receive a draft report of the survey results from Chelsey Farson, Project Manager, and Laurie Urban, Senior Research Associate, both with NRC who is conducting the study. NRC and City Staff will present the results of the survey to City Council at a Study Session in April.

Council is encouraged to read through the proposed survey instrument and come prepared to discuss any concerns or suggestions on the survey, policy questions, and survey format at the City Council Study Session on January 4. Laurie Urban from NRC will be in attendance along with City Staff to answer any questions. For your reference, Staff has also included the 2014 Citizen Survey, 2014 Citizen

Staff Report – Proposed 2016 Citizen Survey January 4, 2016 Page 4

Survey Report, and the final presentation that was given to City Council in 2014; these document will allow City Council to review results from the 2014 Citizen Survey and give City Council an idea of how the results from the 2016 Citizen Survey will be presented.

Given the breadth of questions being proposed and the importance that the 2016 Citizen Survey data will play in the review and update of City Council's strategic plan goals and other key decisions in the provision of City services, City Council directions on this item furthers all of City Council's Strategic Plan goals. These include Visionary Leadership, Effective Governance and Proactive Regional Collaboration; Vibrant, Inclusive and Engaged Community; Beautiful, Desirable, Safe and Environmentally Responsible City; Dynamic, Diverse Economy; Financially Sustainable Government Providing Excellence in City Services; and Ease of Mobility.

Respectfully submitted,

Donald M. Tripp City Manager

EXECUTIVE SUMMARY

SURVEY BACKGROUND

The City of Westminster has conducted a regular, periodic survey of residents' opinions since 1992. Working with National Research Center, Inc. (NRC), Westminster has used the same systematic method for sampling residents and the same set of core questions for each survey administration. The 2014 survey was the 12th administration to monitor the quality of Westminster services and quality of life in the community.

A random sample of 3,000 households received surveys. About 4% of the surveys were undeliverable because the housing unit was vacant or the postal service was unable to deliver the survey as addressed. Of the 2,884 households receiving a survey, 847 completed the survey, providing an overall response rate of 29%. The margin of error for the entire sample is plus or minus three points around any given percentage point. Results also are reported by school district of residence (Adams 12, Adams 50 and Jefferson County) to permit a deeper examination of the data.

Because the City of Westminster has administered resident surveys in the past, comparisons were made between the 2014 responses and those from prior years, when available. The 2014 results also were compared to those of other jurisdictions around the nation and in Colorado's Front Range, made possible through NRC's benchmark database. This database contains resident perspectives gathered in citizen surveys from more than 500 jurisdictions across the U.S., including cities and counties.

HIGHLIGHTS

The 2014 survey contained a series of questions that reflected either directly or indirectly on the City's progress within five themes outlined in Westminster's most recent strategic plan. The survey results are loosely organized around the themes of overall quality of community and government, City services, economic development, safety, community livability and appearance and environment.

OVERALL QUALITY OF COMMUNITY AND GOVERNMENT

Westminster residents enjoy a high quality of life and feel positively about the City government's performance.

- In 2014, one-quarter of survey respondents rated the overall quality of life in Westminster as very good and another 6 in 10 rated it as good, similar to previous years.
- Nine in 10 residents gave positive marks to Westminster as a place to live, 8 in 10 gave positive marks to Westminster as a place to raise children and two-thirds gave positive ratings of Westminster as a place to retire.
- Ratings of aspects of quality of life were similar to the national and Front Range averages.
- More than 8 in 10 Westminster residents gave good or very good ratings to the overall quality of services provided by the City, a rating that was above the benchmarks.
- Nine in 10 survey respondents felt the City was heading in the right direction, similar to 2012.
- Westminster was above national and Front Range average for residents receiving good value for their taxes. The City ranked first in the nation for perceptions of City Council caring what people think.
- Few residents had contacted a City employee in the past year, continuing a downward trend across all survey years. Those who had contacted the City awarded ratings of employee characteristics that were similar to the national and Front Range benchmarks.

CITY SERVICES

Respondents appreciate the quality of service delivery in Westminster and prioritize safety and the quality of neighborhoods when evaluating the City as a place to live.

- Recreation facilities and the appearance of parks and recreation facilities topped the list of City services with nearly 9 in 10 residents rating the quality of these services as good or very good.
- Street repair and economic development received less positive ratings; half of respondents gave positive reviews of the quality of these services.
- Most services were rated higher than or similar to the national and Front Range averages. Only recycling drop-off centers and EMS were lower than both benchmarks.
- When asked to rate the importance of the individual City services, residents cited drinking water
 quality, fire protection, police protection and EMS as most important. Generally, importance
 ratings stayed the same from 2012 to 2014; however, increases were observed for 11 services, such
 as street repair, parks maintenance, recreation programs and code enforcement.
- Services with higher importance and lower quality included street repair, emergency preparedness and economic development. These services may warrant increased attention and resources from the City or monitoring to see if and where improvements or changes could be made.
- Westminster residents generally felt neither well nor poorly informed about their community, and most felt they received too little information about emergency preparedness. Given the upward trend in residents' use of online resources in recent years, the City may consider expanding its use of the internet and online media to disseminate information to its citizens.
- Safety and quality of neighborhoods continued to be the most important attributes to residents' views of the city as a place to live with at least 8 in 10 saying these were highly important.

ECONOMIC DEVELOPMENT

Residents value the city as a place to work and perceived job opportunities in Westminster; they support redevelopment of the former Westminster Mall.

- In 2014, 6 in 10 residents viewed Westminster as a good or very good place to work, an improvement from 2012 and similar to 2010. Ratings were similar to the national benchmark and higher than the Front Range benchmark.
- Many residents were neutral in their opinions of job opportunities in Westminster; however, about one-third rated job opportunities in the city as good or very good, higher than the national and Front Range averages.
- In addition, when asked about their level of support for redeveloping the former Westminster Mall site as an urban scaled development, a large majority (91%) voiced support for this initiative.

SAFETY

Safety is important to Westminster residents' quality of life and, generally, residents feel safe.

- Safety, a top priority for Westminster residents, received high marks in 2014, similar to previous years. Eight in 10 residents reported feeling somewhat or very safe from fires, other natural disasters and violent crime, while nearly two-thirds felt safe from property crimes.
- Residents' ratings of safety from violent crime were similar to the national and Front Range averages. Safety from property crimes was similar to the average for the nation but lower than the average for the Front Range.

LIVABLE COMMUNITY

Although residents are happy with their neighborhoods, the drugs, crime, vandalism and graffiti were top concerns.

- In 2014, 8 in 10 respondents awarded very good marks to the overall quality of their neighborhood, similar to previous years and similar to the national average.
- When asked whether the quality of their neighborhood had improved or declined over the past 12 months, most residents (64%) felt it had stayed the same.
- Upon reviewing a list of 18 potential issues facing the city, residents were most likely to cite drugs, crime, vandalism and graffiti as major or moderate problems. Graffiti and vandalism were believed to be more of a problem in 2014 than in 2012.
- Residents weighed in on City initiatives to improve public transportation. A majority (62%) felt it was important to complete the Northwest Commuter Rail, and a similar proportion voiced support for a tax initiative to provide additional RTD funding for completion of it.
- Respondents more often rode their bikes for fun or exercise in the 12 months prior to the survey (59% had done so at least once in the last year) than they did to shop, get a meal or run errands (26%) or for commuting (15%).

APPEARANCE AND ENVIRONMENT

The appearance of the community is positive aspect of Westminster and residents associate most the phrase "beautiful parks and open spaces" with their image of Westminster.

- At least 9 in 10 residents agreed that descriptions such as "beautiful parks/open space," "financially sound" and "healthy" reflected their image of Westminster. At least 8 in 10 endorsed descriptions such as "business-friendly environment," "environmentally sensitive" and "safe and secure." Most ratings remained stable from 2012 to 2014; however, more people in 2014 endorsed the description "financially sound."
- Most Westminster residents appreciated the physical attractiveness of the city, with 20% giving very good marks and 59% giving good marks, similar to previous years. Two in 10 respondents felt neutral about the attractiveness of the City and almost no respondents gave negative ratings.

SURVEY BACKGROUND

SURVEY PURPOSES

The Westminster Citizen Survey serves as a consumer report card for Westminster by providing residents the opportunity to rate their satisfaction with the quality of life in the City, the community's amenities and local government. The survey gathers community-wide feedback on what is working well and what is not, and assesses residents' priorities for community planning and resource allocation. The survey's focus on the quality of service delivery and the importance of services lays the groundwork for tracking community opinions about the core responsibilities of Westminster City government, helping to maximize service quality over time.

The baseline Westminster Citizen Survey was conducted in 1992. The 2014 survey is the 12th iteration, providing over 20 years of data. This survey provides a reliable source to track resident opinion that will continue to be examined periodically over the coming years. It allows the City to monitor the community's pulse, as Westminster changes and grows.

SURVEY METHODS

The Westminster Citizen Survey was administered by mail to a representative sample of 3,000 city residents. Each household received three mailings beginning in March 2014. The first mailing was a prenotification postcard announcing the upcoming survey. Over the following two weeks, households received a letter from the Mayor inviting the household to participate in the 2014 Westminster Citizen Survey, a five-page questionnaire and self-mailing envelope. Respondents also were given the option to complete the survey via the web through a link that was provided in the cover letters. Completed surveys were collected through the mail and online over a five week period. The survey instrument itself appears in *Appendix E: Survey Instrument*.

About 4% of the mailings were undeliverable because the housing unit was vacant or the postal service was unable to deliver the survey as addressed. Of the 2,884 households receiving a survey, 847 completed the survey, providing an overall response rate of 29%.

Survey results were weighted so that respondents' gender, age, housing unit type (attached versus detached), tenure (rent versus own), race, ethnicity and school district of residence were represented in the proportions reflective of the entire city. (For more information see the detailed survey methodology in *Appendix D: Survey Methodology*.)

How the Results Are Reported

For the most part, frequency distributions (the percent of respondents giving each possible response to a particular question) and the "percent positive" are presented in the body of the report. The percent positive is the combination of the top two most positive response options (i.e., "very good" and "good," "strongly agree" and "somewhat agree," "very safe" and "somewhat safe," etc.). The full set of frequencies can be found in *Appendix A: Complete Set of Survey Frequencies*.

On many of the questions in the survey, respondents gave an answer of "don't know." The proportion of respondents giving this reply is always shown in the appendices. However, "don't know" responses have generally been removed from the analyses presented in the body of the report, unless otherwise indicated (for example, they are discussed in the body of the report if 30% or more respondents said "don't know" to a question). In other words, the majority of the tables and graphs in the body of the report display the responses from respondents who had an opinion about a specific item.

For some questions, respondents were permitted to select multiple responses. When the total exceeds 100% in a table for a multiple response question, it is because some respondents are counted in more than one category. When a table for a question that only permitted a single response does not total to exactly 100%, it is due to the convention of rounding percentages to the nearest whole number.

PRECISION OF ESTIMATES

It is customary to describe the precision of estimates made from surveys by a "level of confidence" (or margin of error). The 95 percent confidence interval for this survey is generally no greater than plus or minus three percentage points around any given percent reported for the entire sample (847).

COMPARING SURVEY RESULTS BY GEOGRAPHIC AND DEMOGRAPHIC SUBGROUPS

Select survey results were compared by school district and demographic characteristics of respondents and any differences in ratings are discussed throughout the report body. Tables displaying the comparisons by the three school districts and respondent demographic characteristics are presented in *Appendix B: Survey Results Compared by Respondent Characteristics*.

Where comparisons are made between subgroups, the margins of error are less precise than the margin of error for the whole sample. For each of the three school districts in Westminster (Jefferson, Adams 12 or Adams 50), the margin of error rises to approximately plus or minus 8% since the number of respondents were approximately 350 for Jefferson County, 270 for Adams 12 and 227 for Adams 50. Comparisons by respondent demographics have margins of error ranging from plus or minus 5% for 450 respondents to as much as plus or minus 11% for approximately 80 respondents.

COMPARING SURVEY RESULTS OVER TIME

The 2014 survey was the 12th in a series of citizen surveys and the 2014 results are presented along with ratings from past surveys when available. <u>Differences between the 2012 and 2014 survey results can be considered "statistically significant" if they are six percentage points or more.</u> Trend data for Westminster represent important comparison data and should be examined for improvements or declines. Deviations from stable trends over time especially represent opportunities for understanding how local policies, programs or public information may have affected residents' opinions.

For ease of comparison, the results from past surveys are reported using the percent positive ("very good" plus "good"). Data from all past survey years, except 1994, could be converted to this metric. As such, comparison data from all past years, except 1994, are included in this report. If interested, readers may refer to the Westminster archives for the 1994 average results.

COMPARING SURVEY RESULTS TO OTHER COMMUNITIES

NRC's database of comparative resident opinion is comprised of resident perspectives gathered in citizen surveys from approximately 500 communities whose residents evaluated their services. Conducted with typically no fewer than 400 residents in each community, opinions are intended to represent over 30 million Americans.

National and Front Range benchmark comparisons have been included in the report when available. Benchmark comparisons have been provided when similar questions on the Westminster survey are included in NRC's database and there are at least five communities in which the question was asked, though most questions are compared to more than five other cities across the country or in the Front Range. Additional information on NRC's benchmarking database, including communities to which Westminster was compared nationally and in the Front Range, can be found in *Appendix C: Benchmark Comparisons*.

Where comparisons for quality ratings and those related to resident behavior, circumstance or to a local problem were available (e.g., the percent of residents having contacted the City in the last 12 months), the City of Westminster's results were generally noted as being "higher" than the benchmark, "lower" than the benchmark or "similar" to the benchmark. In instances where ratings are considerably higher or lower than the benchmark, these ratings have been further demarcated by the attribute of "much," (for example, "much lower" or "much higher"). These labels come from a statistical comparison of Westminster's rating to the benchmark where a rating is considered "similar" if it is within the margin of error; "higher" or "lower" if the difference between Westminster's rating and the benchmark is greater than but less than twice the margin of error; and "much higher" or "much lower" if the difference between Westminster's rating and the benchmark is more than twice the margin of error. Data for a number of items on the survey is not available in the benchmark database (e.g., some of the services or aspects of the community). These items are excluded from the benchmark tables.

SURVEY RESULTS

The 2014 survey contained a series of questions that reflected either directly or indirectly on the City's progress within five themes outlined in Westminster's most recent strategic plan. The report of results is loosely organized around themes of overall quality of community and government, City services, economic development, safety, community livability and appearance and environment.

OVERALL QUALITY OF COMMUNITY AND GOVERNMENT

Residents' opinions about their quality of life, satisfaction with City service delivery and City government performance are invaluable for local governments in determining budget priorities and assessing the overall climate of the community.

QUALITY OF LIFE

In 2014, one-quarter of Westminster residents rated the overall quality of life in the City as very good and another 6 in 10 rated it as good, similar to previous years.

Westminster residents' opinions were compared to those of residents in other communities across the nation and in the Front Range. Overall quality of life received ratings similar to the national and Front Range comparisons (see *Appendix C: Benchmark Comparisons* for more information on the benchmark comparisons).

1%

Neither good
nor bad
12%

FIGURE 1: OVERALL QUALITY OF LIFE IN WESTMINSTER

In addition to the overall quality of life in the city, survey respondents evaluated the city as a place to live, raise children and retire. Nine in 10 residents gave positive marks to Westminster as a place to live, while about 8 in 10 gave positive marks to Westminster as a place to raise children. About two-thirds viewed Westminster as good or very good place to retire. Resident opinion in 2014 was similar to previous years.

When results for the various aspects of quality of life were compared to other communities, Westminster was similar to the national and Front Range benchmarks across all areas (see *Appendix C: Benchmark Comparisons* for more information).

Survey responses were compared by respondent demographic characteristics and the school district in which a respondent lived. Residents with household incomes of less than \$25,000, those who lived in the community for a longer period of time (15 years or more) and those living in attached housing units gave higher ratings to the city as a place to retire than did their counterparts (see *Appendix B: Survey Results Compared by Respondent Characteristics*). Responses for these aspects of quality of life in the community were similar across the three school districts.

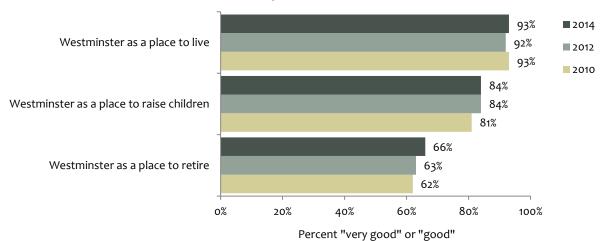

FIGURE 3: ASPECTS OF QUALITY OF LIFE COMPARED BY YEAR

OVERALL QUALITY OF CITY SERVICES

Westminster residents appreciated the quality of services provided by the City, with 22% giving a very good rating and 63% giving a good rating in 2014. Over 1 in 10 residents gave neutral ratings and only 1% gave a bad rating. No one felt the overall quality of City services was very bad. Ratings remained stable from previous survey years.

Resident ratings of the overall quality of services provided by the City of Westminster were higher than the national and Front Range benchmarks (see *Appendix C: Benchmark Comparisons* for more information).

When responses to the overall quality of City services were compared by respondent characteristics, those who lived in detached housing units and those who had lived in the community for 10-14 years gave higher evaluations than did their counterparts (see *Appendix B: Survey Results Compared by Respondent Characteristics*). Ratings for the overall quality of services were similar across the three school districts.

Overall, how would you rate the quality of the services provided by the City of Westminster?

2002

Since 2002, residents of Westminster have shared their opinions regarding the overall direction of the City. In 2014, 9 in 10 respondents felt the City was heading in the right direction, similar to 2012 but the highest rating given since 2004.

Respondents with lower household income levels (less than \$25,000) were less likely to feel that the City was headed in the "right" direction than were those with higher incomes (see *Appendix B: Survey Results Compared by Respondent Characteristics*). No differences were observed across the three school districts.

FIGURE 6: OVERALL DIRECTION THE CITY IS HEADING COMPARED BY YEAR

2008

Percent "right direction"

2010

2012

2014

Central to citizens' opinion of their community's direction is their trust in local government. Westminster residents generally were confident in the operations of their City government, with 7 in 10 agreeing that they receive good value for the taxes they pay to the City and about 6 in 10 agreeing that the City of Westminster welcomes citizen involvement. However, only about half of residents surveyed agreed that the Westminster City Council cares what citizens like them think. These results were similar from 2012 to 2014.

About 30% of respondents selected "don't know" when asked whether the City government welcomes citizen involvement and cares what people like me think (see *Appendix A: Complete Set of Survey Frequencies* for the full set of responses, including "don't know").

When results were compared to ratings from other communities, Westminster was higher than the nation and the Front Range for residents receiving good value for their taxes and City Council caring what people think. The City ranked first out of nine communities across the nation and first out of five Front Range communities for perceptions of City Council caring. Westminster government welcoming citizen involvement received ratings that were similar to the benchmarks (see *Appendix C: Benchmark Comparisons* for more information).

Older respondents (age 55 or older) were more likely to agree that they receive good value for the City taxes they pay and that the City government welcomes citizen involvement than were younger respondents (see *Appendix B: Survey Results Compared by Respondent Characteristics*). Residents living in the Jefferson County school district were less likely to agree that the City welcomes citizen involvement and that the City Council cares what people like them think than did residents from the other school districts.

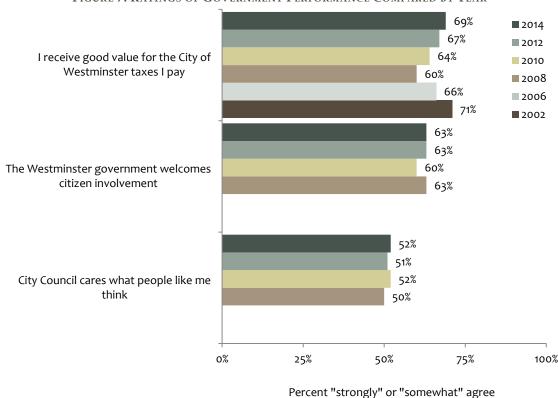

FIGURE 7: RATINGS OF GOVERNMENT PERFORMANCE COMPARED BY YEAR

CITY EMPLOYEES

In Westminster, contact with City employees has declined over the past two decades, from 7 in 10 in 1992 to about 4 in 10 residents reporting contact in 2014. This level of contact in 2014 was similar to 2012, but has been trending upward slightly since 2010.

Residents' level of contact with City employees was lower than the nation and the Front Range (see *Appendix C: Benchmark Comparisons* for more information).

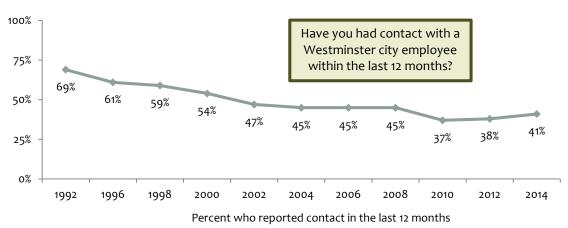

FIGURE 8: CONTACT WITH CITY EMPLOYEE COMPARED BY YEAR

Residents who had contacted City employees in the year prior to the survey were given the opportunity to rate their impression of the employee in their most recent contact. Respondents had a high opinion of City employees, with 8 in 10 rating their overall impression as good or very good in 2014, similar to 2012. In addition, most residents held positive views of specific employee characteristics, with at least 8 in 10 awarding good or very good marks to employees' responsiveness, courtesy and knowledge (see Figure 10 on the next page). Slightly fewer, approximately 7 in 10, gave positive marks to City employees making them feel valued, a new question in 2014. Between 2012 and 2014, ratings of responsiveness, courtesy and knowledge remained stable (while minor differences were noted, these were not statistically significant).

Where comparisons to other communities were available, Westminster employees received ratings similar to the national and Front Range benchmarks (see *Appendix C: Benchmark Comparisons* for more information).

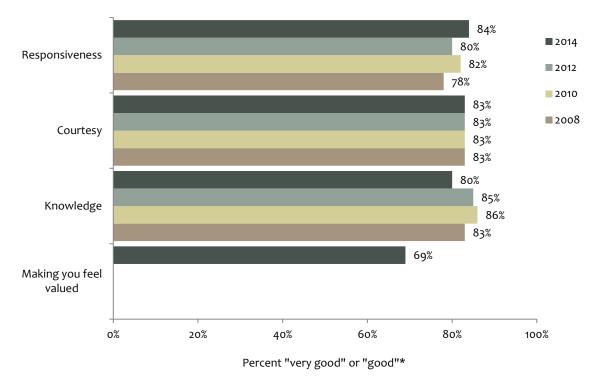

Older residents (age 55 or older) gave higher ratings to City employees making them feel valued than did those who were younger (see *Appendix B: Survey Results Compared by Respondent Characteristics*). Those with household incomes of less than \$25,000 gave lower evaluations to their overall impression of the City employee in their most recent contact than did those with higher incomes. Residents in detached housing units were more likely to give favorable ratings to the employee's knowledge, responsiveness and courtesy than were those living in attached units. Ratings of employee characteristics were similar across the three school districts.

FIGURE 9: OVERALL IMPRESSION OF CITY EMPLOYEE(S) COMPARED BY YEAR

^{*}Asked only of those who had had contact with a City employee in the last 12 months.

FIGURE 10: RATINGS OF EMPLOYEE CHARACTERISTICS COMPARED BY YEAR

^{*}Asked only of those who had had contact with a City employee in the last 12 months.

[&]quot;Making you feel valued" was a new item in 2014.

CITY SERVICES

Westminster residents evaluated the quality of 25 individual services provided by the City. The top rated services in 2014 were recreation facilities and the appearance of parks and recreation facilities, with nearly 9 in 10 residents giving good or very good ratings. More than 8 in 10 survey respondents also gave high marks to fire protection, trails, emergency medical services, parks maintenance, libraries, recreation programs, drinking water quality and preservation of natural areas. Individual services that received lower ratings were street repair and economic development, with just over half of respondents giving positive reviews of the quality of these services.

Between 30% and 47% of respondents indicated "don't know" when asked to rate recycling drop off centers, code enforcement, municipal court, building permits/inspections and emergency preparedness (see *Appendix A: Complete Set of Survey Frequencies* for all response to the survey questions, including "don't know").

Overall, ratings remained stable from 2012 to 2014, but have increased over the years. Improvements were noted for police protection, snow removal, emergency preparedness, municipal court, recycling drop off centers, building permits/inspections and code enforcement; however, most of these ratings were similar to those in 2010.

When results were compared to other communities in the nation, 13 services were higher than the benchmark, 10 were similar and two were lower (recycling drop-off centers and EMS). Compared to other communities in the Front Range, nine services were higher than the benchmark, eight were similar and five were lower (recycling drop-off centers, EMS, libraries, trails and utility billing). Police protection, fire protection and appearance of parks and recreation facilities were not available for comparison to the Front Range (see *Appendix C: Benchmark Comparisons* for more information).

Residents with lower household incomes (less than \$25,000), those with a shorter tenure in the City and those living in attached housing units gave more favorable reviews to the individual City services than did their counterparts (see *Appendix B: Survey Results Compared by Respondent Characteristics*).

When looking at ratings of individual services by the school districts, results varied. Respondents living in the Jefferson County school district tended to give lower ratings to street cleaning; land use, planning and zoning; recreation programs; building permits and inspections; and utility billing/meter reading. Adams 50 residents were more likely to give positive evaluations to recycling drop off centers, police traffic enforcement, police protection, fire protection, animal management, libraries and recreation programs and facilities than were residents in the other two districts.

In addition to rating the quality of City services, residents were asked to rate the importance of these services. Most important to Westminster residents in 2014 were drinking water quality and fire protection, with nearly all respondents endorsing these as essential or very important. At least 9 in 10 felt that police protection, EMS, snow removal and street repair were important services. The services deemed less important to residents were building permits/inspections and street cleaning, with about half of all survey respondents rating each as essential or very important.

Services with notable increases in importance ratings included street repair, sewer services, parks maintenance, recreation facilities, land use, recreation programs, municipal court, code enforcement, utility billing, animal management and street cleaning. The importance of the remaining services in 2014 was similar to 2012.

FIGURE 12: IMPORTANCE OF CITY SERVICES COMPARED BY YEAR

COMPARISON OF QUALITY AND IMPORTANCE OF CITY SERVICES

Most government services are considered to be important, but when competition for limited resources demands that efficiencies or cutbacks be instituted, it is wise not only to know what services are deemed most important to residents' quality of life, but which services among the most important are perceived to be delivered with the lowest quality. It is these services – more important services delivered with lower quality – to which attention needs to be paid first.

To help guide City staff and officials with decisions on future resource allocation, resident ratings of the importance of City services were compared to their ratings of the quality of these services (see the chart on the next page). To identify the services perceived by residents to have relatively lower quality at the same time as relatively higher importance, all services were ranked from highest perceived quality to lowest perceived quality and from highest perceived importance to lowest perceived importance. Some services were in the top half of both lists (higher quality and higher importance); some were in the top half of one list but the bottom half of the other (higher quality and lower importance or lower quality and higher importance); and some services were in the bottom half of both lists.

Services were classified as "more important" if they were rated as essential or very important by 73% or more of respondents. Services were rated as "less important" if they received a rating of less than 73%. Services receiving quality ratings of very good or good by 71% or more of respondents were considered of "higher quality" and those with ratings lower than 71% were considered to be of "lower quality." This classification divided the services in half.

Services categorized as higher in importance and lower in quality included street repair, emergency preparedness and economic development. Emergency preparedness saw an increase in ratings from 2012 to 2014 and was higher than both benchmarks. Street repair and economic development were among the lowest rated services but were similar to or higher than the benchmark comparisons. These are services on which the City might want to focus more attention and resources or monitor to potential improve residents perceptions service quality.

Services deemed higher in importance and higher in quality were drinking water quality, EMS/ambulance, fire protection, sewer services, snow removal, police protection, preservation of natural areas, libraries, police traffic enforcement, libraries and parks maintenance. Snow removal and police traffic enforcement moved from being higher in importance and lower in quality in 2012 to being of higher importance and higher quality in 2014.

The lower in importance, higher in quality services included recreation facilities, recreation programs, trails, and appearance of parks and recreation facilities.

Services categorized as lower in importance and lower in quality were land use, planning and zoning; municipal courts; building permits/inspections; recycling drop off centers at City facilities; utility billing/meter reading; City Code enforcement; animal management; and street cleaning.

FIGURE 13: BALANCING QUALITY AND IMPORTANCE

COMMUNITY INFORMATION

An engaged community is one in which residents are up-to-date about what is going on in their community. In 2014, nearly 4 in 10 residents felt well or very well informed about the City of Westminster; the largest proportion of respondents (45%) felt "neither well nor poorly" informed about the City. Although this represents a slight downward trend since 2010, ratings in 2014 were similar to 2012.

Older residents, those with incomes less than \$25,000 and those who had lived in the city for a longer period of time felt more informed about the City of Westminster than did younger residents, those with higher incomes and those with a shorter tenure in the city (see *Appendix B: Survey Results Compared by Respondent Characteristics*). Adams 50 residents tended to feel more informed about the City than did those in the other school districts.

In general, how well informed do you feel about the City of Westminster?

Very well

8%

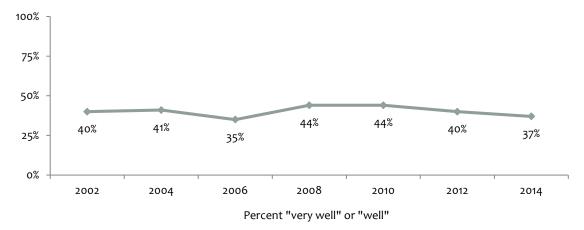

Very poorly

13%

Neither well nor poorly
45%

FIGURE 14: LEVEL OF BEING INFORMED ABOUT THE CITY

Keeping residents informed may also contribute to the City's level of preparedness and resident safety in emergency situations. When asked about the amount of information they received about emergency preparedness in the City of Westminster, most respondents (63%) felt it was too little, while the remaining 37% felt it was the right amount; no residents said they received too much information about emergency preparedness. (This was a new question in 2014.)

Responses were compared by respondent demographics. Those feeling they receive the "right amount" of information tended to increase with age and decrease with household income levels (see *Appendix B: Survey Results Compared by Respondent Characteristics*). Residents living in the Jefferson County and Adams 12 school districts were more likely to feel they receive "too little" emergency preparedness information than those in Adams 50.

Thinking about the amount of information you have about emergency preparedness in the City of Westminster, would you say that you have too little, the right amount or too much information?

Too little

63%

Too much

0%

FIGURE 16: EMERGENCY PREPAREDNESS INFORMATION

In order to provide needed information to citizens about their community, it is helpful to know what sources residents rely upon most often. In Westminster, residents reported that television news was their most relied upon source for information about the City, followed by the City's website, the *Denver Post* and other online news sources. Less than 1 in 10 mentioned that the other sources of information were their number one source.

When compared to 2012, a higher proportion of survey respondents in 2014 reported using television news, word of mouth and social media as their number one or two source of information about the City. The *Westminster Window* and *Denver Post* were used less often as a number one or two source for information about Westminster in 2014 than in 2012.

As online sources become increasingly common among communities in the United States for distributing and receiving information, they stand to provide useful resources for local governments seeking to communicate with their citizens. In Westminster, residents' use of blogs and social networking sites such as Facebook and Twitter have steadily increased since 2010. In 2014, nearly 7 in 10 residents reported using social networking sites and 3 in 10 reported using blog sites in a typical month.

FIGURE 19: USE OF BLOGS AND SOCIAL NETWORKING SITES COMPARED BY YEAR

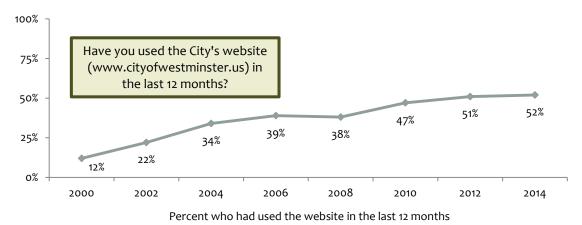

Percent who reported having ever used these sites in a typical month

Mirroring the upward trend in blogs and social media use, use of the City's website continued to climb in 2014, with half of survey respondents having accessed the website in the 12 months prior to the survey. This was similar to 2012 but much higher than in 2000, when the question was first asked.

Compared to website use in other communities in the nation and the Front Range, Westminster residents' use of the City's website was much lower.

FIGURE 20: USE OF CITY WEBSITE COMPARED BY YEAR

Those who had used the City website in the past year were asked to rate its quality along five dimensions. Three-quarters of respondents said the website's current information and appearance was good or very good. Seven in 10 gave positive reviews of the online services offered and 6 in 10 rated the website's ease of navigation and search function as good or very good. In general, ratings were somewhat lower in 2014 than in 2012; significant declines were noted for appearance and ease of navigation.

Comparisons to other communities in the nation were available for two items: current information on the Westminster website was rated higher than the national average, while ease of navigation was similar to the national average. Front Range comparisons were not available (see *Appendix C: Benchmark Comparisons* for more information).

Generally, ratings of the City's website were similar when compared by respondent demographics (see *Appendix B: Survey Results Compared by Respondent Characteristics*). Adams 50 residents gave more positive ratings to the website's current information and the online services offered than did those from the other school districts.

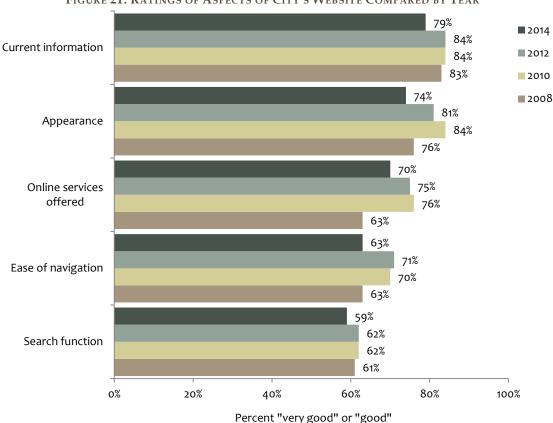

FIGURE 21: RATINGS OF ASPECTS OF CITY'S WEBSITE COMPARED BY YEAR

*Asked only of those who had accessed the City's website in the last 12 months.

KEY ATTRIBUTES

Residents reviewed a list of 13 community attributes and rated how important each was to making Westminster a good place to live. Standing apart as the top attributes were sense of safety and quality of neighborhoods, with at least 8 in 10 residents endorsing each as highly important for the city as a place to live. Six in 10 rated schools and shopping convenience as highly important and over half considered physical appearance of development in the city, parks/playgrounds and open space/trails to be highly important. Of less importance to residents' sense of Westminster as a place to live were recreation programs/sports and variety of neighborhoods, although most respondents still considered these to be at least moderately important.

When results were compared over survey years, resident importance ratings of most city attributes tended to increase from 2012 to 2014; however, physical appearance of development, recreation centers, access to transit and recreation programs/sports remained similar. Variety of neighborhoods was a new item on the 2014 survey and could not be compared to previous years.

When compared by respondent characteristics, younger residents (18-34) were more likely to feel that the quality of neighborhoods, open space and trails, parks and playgrounds, safety and schools were "highly" important to Westminster as a place to live than were older residents (see *Appendix B: Survey Results Compared by Respondent Characteristics*). Overall, perceptions of importance of these attributes were similar across the three school districts.

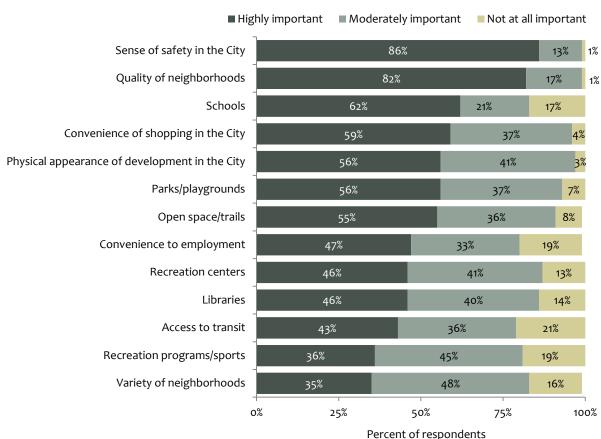

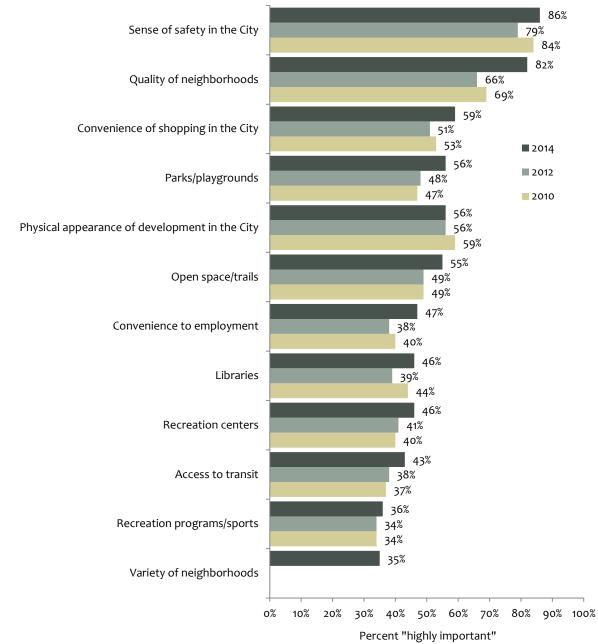

FIGURE 22: RATINGS OF IMPORTANCE OF ATTRIBUTES FOR CITY AS A PLACE TO LIVE

Prepared by National Research Center, Inc.

FIGURE 23: RATINGS OF IMPORTANCE OF ATTRIBUTES FOR CITY AS A PLACE TO LIVE COMPARED BY YEAR

Note: "Quality of neighborhoods" and "Variety of neighborhoods" were the combined item, "Quality/variety of neighborhoods," prior to 2014. The 2010 and 2012 responses are compared to "Quality of neighborhoods" in the figure above.

ECONOMIC DEVELOPMENT

A thriving community includes a strong local economy where residents are able to find gainful employment. In Westminster, about half of residents surveyed in 2014 rated the city as a good place to work, and another 16% said it was a very good place to work. These results represented an improvement from 2012 to 2014, returning to levels similar to 2010.

Residents awarded ratings of Westminster as a place to work that were similar to the national benchmark and higher than the Front Range benchmark (see *Appendix C: Benchmark Comparisons* for more information).

Very good
16%

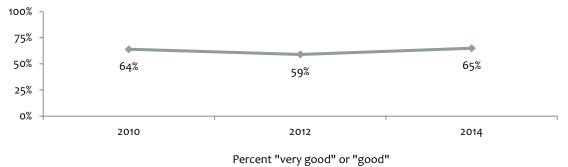

Very bad
1%

Bad
6%

Neither good nor
bad
28%

FIGURE 24: WESTMINSTER AS A PLACE TO WORK

In addition, residents evaluated job opportunities in Westminster. Many residents were neutral on this topic, with 4 in 10 rating the city's job opportunities as neither good nor bad. One-quarter rated job opportunities as good and 1 in 10 rated it as very good. However, one-quarter felt job opportunities in the city was bad or very bad. Results were similar from 2012 to 2014.

About 4 in 10 respondents indicated "don't know" when rating job opportunities in Westminster (see *Appendix A: Complete Set of Survey Frequencies* for all responses, including "don't know").

Compared to other communities in the nation and the Front Range, job opportunities in Westminster was rated higher than the benchmarks.

Residents with household incomes between \$25,000 and \$99,999 gave lower evaluations to job opportunities in Westminster than did those with higher or lower income levels (see *Appendix B: Survey Results Compared by Respondent Characteristics*). No differences were observed across the three school districts.

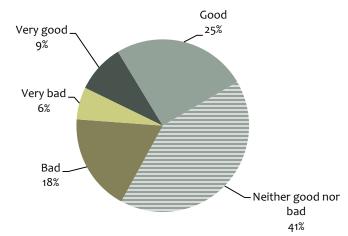

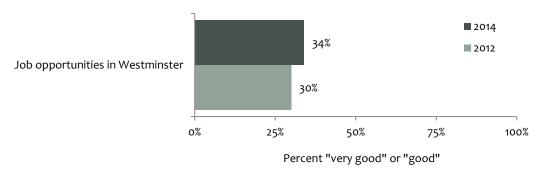

FIGURE 26: JOB OPPORTUNITIES IN WESTMINSTER

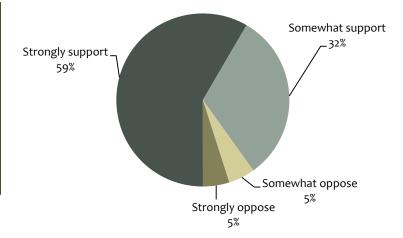

Projects to improve Westminster's commercial areas can energize the economy. A new question was added to the 2014 survey to assess residents' level of support for redevelopment of the former Westminster Mall site. A vast majority of survey respondents voiced support for the redevelopment of the former Westminster Mall site as an urban scaled development. Six in 10 residents surveyed strongly supported this measure and another one-third somewhat supported it.

FIGURE 28: SUPPORT FOR REDEVELOPMENT OF WESTMINSTER MALL

The City is considering redevelopment of the former Westminster Mall site as an urban scaled development (a downtown-like development consisting of office buildings, retail shops, restaurants, entertainment, and multi-story residential buildings). To what extent do you support or oppose this type of redevelopment?

SAFETY

As previously mentioned, residents overwhelmingly agreed that safety was a priority for living in Westminster. Eight in 10 residents reported feeling somewhat or very safe from fires, other natural disasters and violent crime, while nearly two-thirds felt safe from property crimes. Safety from fires, violent crime and property crime could be compared to previous years and were stable from 2012 to 2014.

Residents' ratings of safety from violent crime were similar to the national and Front Range averages. Safety from property crimes was similar to the national benchmark but lower than the Front Range benchmark. Safety from fires was higher than the national benchmark; comparisons to the Front Range were not available.

Residents age 55 or older felt safer from property crimes than did those who were younger (see *Appendix B: Survey Results Compared by Respondent Characteristics*). Feelings of safety from violent crimes increased with household income levels. Feelings of safety from the various types of crime, fire and natural disasters were similar across the three school districts.

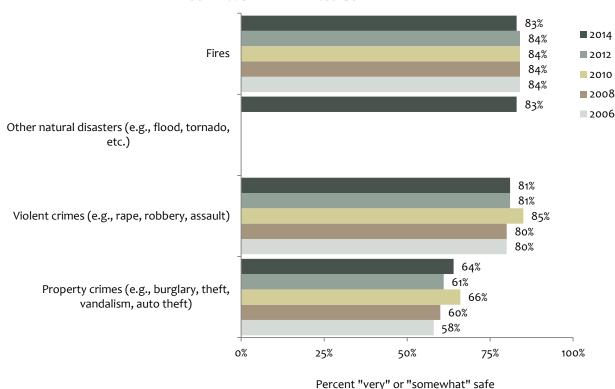

FIGURE 29: SAFETY RATINGS COMPARED BY YEAR

LIVABLE COMMUNITY

In evaluating the livability of their community, residents of Westminster were asked to rate the quality of their neighborhoods, as well as potential issues they saw in their communities.

NEIGHBORHOOD QUALITY

In 2014, one-quarter of those surveyed awarded very good marks to the overall quality of their neighborhood and another 54% awarded good marks, which was similar to previous years.

Westminster residents gave ratings of the overall quality of their neighborhood that were similar to the national average; comparisons to the Front Range were not available for this question.

Respondents who lived in the City between five and nine years tended to give lower ratings to the overall quality of their neighborhood (see *Appendix B: Survey Results Compared by Respondent Characteristics*). Residents living in the Adams 50 school district tended to give lower ratings to the overall quality of their neighborhood than did those living in the other school districts.

FIGURE 30: OVERALL QUALITY OF NEIGHBORHOOD

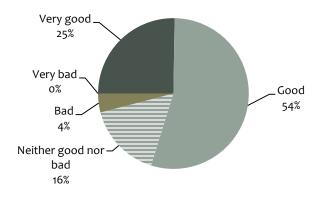

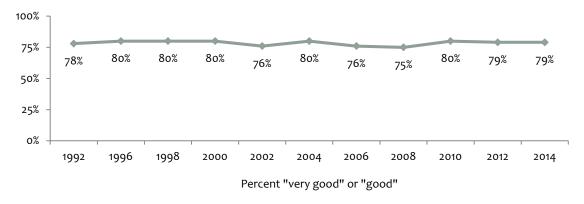

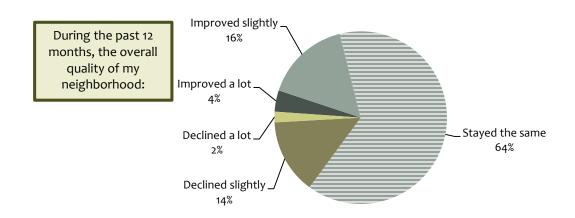

FIGURE 31: OVERALL QUALITY OF NEIGHBORHOOD COMPARED BY YEAR

When asked whether the quality of their neighborhood had improved or declined over the past 12 months, most residents (64%) felt it had stayed the same, 20% felt it had improved and 16% said it had declined. Evaluation of the quality of neighborhoods in 2014 was similar to 2012.

Change in neighborhood quality was compared by school district across survey years (see Figure 33 on the following page). Residents living in the Adams 12 school district were less likely to feel that the quality of their neighborhood had improved compared to the other districts, while those in Adams 50 were more likely to voice improvements. Compared to 2012, a smaller proportion of residents in 2014 living in the Adams 12 school district felt that the quality of their neighborhood had improved while a larger proportion felt it had stayed the same. Those living in Adams 50 in 2014 were less likely to feel that the quality of their neighborhood had declined and more likely to feel that the quality had stayed the same.

POTENTIAL CONCERNS IN WESTMINSTER

Survey respondents were given a list of 18 potential issues facing the city and asked to rate how much of a problem they thought each was. Residents identified drugs, crime, vandalism and graffiti as most problematic in 2014, with at least 4 in 10 rating each as a major or moderate problem. The availability of trails or trail connections and the availability of parts were less of a concern for residents, with about 1 in 10 citing these as a major or moderate problem.

In general, ratings were stable from 2012 to 2014; however, more people in 2014 felt that taxes, juvenile problems, graffiti and vandalism were major or moderate problems compared to 2012.

At least 30% of survey respondents said "don't know" when rating the potential issues of drugs and juvenile problems (see *Appendix A: Complete Set of Survey Frequencies* for a set of all responses, including "don't know").

When ratings for the potential problems were compared by respondent demographic characteristics, generally, older respondents (age 55 or older) and those who had lived in the community for 20 years or more were more likely to view them as "major" or "moderate" problems compared to their counterparts (see *Appendix B: Survey Results Compared by Respondent Characteristics*). Residents' opinions about the list of potential concerns varied by school district; those living in the Adams 50 school district were more concerned about vandalism, graffiti, too much growth, run down buildings juvenile problems and availability of trails or trail connections than were those residing in the other two districts.

FIGURE 34: POTENTIAL PROBLEMS COMPARED BY YEAR

To what degree, if at all, are the following problems in Westminster? (Percent "major" or "moderate" problem)	2000	2002	2004	2006	2008	2010	2012	2014

[&]quot;Resources to support education" and "availability of trails or trail connections" were new items in 2014.

MOBILITY IN WESTMINSTER

A livable community is one that has a variety of public transportation options available to its residents. In 2014, respondents weighed in on initiatives aimed at improving public transportation.

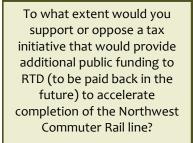

In November 2004, voters in the Denver Metro Area approved funding for the RTD FasTracks mass transit project, which included Northwest Commuter Rail service from Denver to Longmont, including Westminster, Broomfield, Louisville and Boulder. Residents were asked how important it was that commuter rail service be completed in the Northwest Corridor. About 3 in 10 respondents felt it was essential to complete the project and another 3 in 10 felt it was very important. One-quarter said it was somewhat important, while just 13% said it was not at all important.

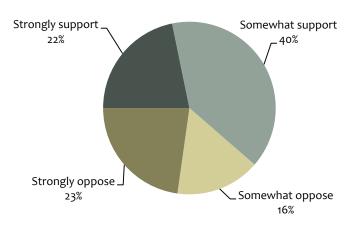

FIGURE 35: IMPORTANCE OF COMPLETING COMMUTER RAIL IN NORTHWEST CORRIDOR

In a related area, Westminster residents gave their opinions on a tax initiative to provide additional funding to RTD to accelerate completion of the Northwest Commuter line. Opinions were mixed, with 6 in 10 residents in support of this measure and 4 in 10 in opposition. The largest proportion of residents (40%) said they "somewhat" supported this initiative, and the proportion of those voicing strong support and strong opposition was similar (22% versus 23%, respectively).

FIGURE 36: SUPPORT FOR ADDITIONAL RTD FUNDING

When responses to these transportation initiatives were compared by respondent characteristics, those with a shorter tenure in the city felt it was more important to complete commuter rail service in the Northwest Corridor and also were more likely to support a tax initiative to provide additional funding to complete it (see *Appendix B: Survey Results Compared by Respondent Characteristics*). Younger respondents and those living in attached units also were more likely to support a tax to help fund the completion of the commuter rail. Responses for both of these questions were similar across the three school districts.

For the first time in 2014, Westminster residents were asked about their bicycling habits. Many residents reported riding a bicycle as an alternative form of sustainable transportation. Four in 10 respondents rode a bike more than once a month for fun or exercise in the 12 months prior to the survey. One-quarter had ridden their bike to shop, get a meal or run errands at least once in the year prior to the 2014 survey. About 15% had ridden their bike at least once to commute to work or school.

Residents age 55 or older, those with lower incomes (less than \$100,000) and those who had lived in the city for a longer period of time were less likely to have ridden a bicycle to shop, get a meal or run an errand and for fun or exercise than were their counterparts (see *Appendix B: Survey Results Compared by Respondent Characteristics*). Respondents living in Adams 12 school district were less likely to have commuted by bicycle in the 12 months prior to the survey, while those living in Jefferson County were more likely to have ridden a bike for fun or exercise.

FIGURE 37: BICYCLE TRANSPORTATION In the last 12 months, about how many times, if at all, have you or another household member ridden a bicycle... ■ 2 times a week or more ■ 2 to 4 times a month Once a month or less ■ Never For fun or exercise 22% 20% To shop, get a meal, or run errands 8% 12% 74% For commuting 3% 6% 85% 0% 25% 50% 75% 100%

APPEARANCE AND ENVIRONMENT

A community's image encompasses both its physical attributes and its dedication to improving those attributes while preserving the natural environment. In 2014, residents were asked whether they agreed or disagreed with a series of potential descriptions of the City of Westminster. At least 9 in 10 agreed that "beautiful parks/open space," "financially sound" and "healthy" reflected their image of Westminster. At least 8 in 10 endorsed descriptions such as "business-friendly environment," "environmentally sensitive" and "safe and secure." Three-quarters agreed that "innovative and progressive" and "vibrant neighborhoods" described their image of the city. When results could be compared to 2012, most ratings remained stable, although more people in 2014 than in 2012 agreed with the description, "financially sound."

FIGURE 38: IMAGE OF THE CITY COMPARED BY YEAR

To what extent do you agree or disagree that each of the following statements describes your image of the City of Westminster? (Percent "strongly" or "somewhat" agree or ratings as top 1, 2 or 3 phrase)	2006	2008	2010	2012	2014
Beautiful parks/open spaces	70%	83%	85%	95%	93%
Financially sound	33%	35%	35%	84%	92%
Healthy		N.	A		90%
Business-friendly environment	30%	39%	30%	82%	87%
Environmentally sensitive		NA		88%	83%
Safe and secure	40%	59%	65%	82%	82%
Innovative and progressive	28%	33%	29%	79%	77%
Vibrant neighborhoods	18%	23%	32%	73%	76%

Note: In 2014 and 2012, respondents were asked the extent to which they agreed or disagreed that each statement describes their image of the City. In 2010 and 2008, respondents were asked to identify the three phrases that best described their image of the City. In 2006, respondents could select any phrase that described their image of the City. "Healthy" was a new item in 2014.

Most Westminster residents appreciated the physical attractiveness of the city, with 2 in 10 giving very good marks and 6 in 10 giving good marks. Another 2 in 10 felt neutral about the attractiveness of the city and almost no respondents gave negative ratings. Results remained stable across survey years.

APPENDIX B: SURVEY RESULTS COMPARED BY RESPONDENT CHARACTERISTICS

SELECT SURVEY RESPONSES COMPARED BY DEMOGRAPHIC CHARACTERISTICS

Survey responses to selected survey questions have been compared by respondent demographics. ANOVA and chi-square tests of significance were applied to these comparisons of survey questions. A "p-value" of 0.05 or less indicates that there is less than a 5% probability that differences observed between subgroups are due to chance; or in other words, a greater than 95% probability that the differences observed are "real." Cells shaded grey indicate statistically significant differences (p < .05) between at least two of the subgroups.

SELECT SURVEY RESPONSES COMPARED BY AREA OF RESIDENCE

Survey responses to selected survey questions have been compared by area of residence (i.e., school district). ANOVA and chi-square tests of significance were applied to these comparisons of survey questions. A "p-value" of 0.05 or less indicates that there is less than a 5% probability that differences observed between subgroups are due to chance; or in other words, a greater than 95% probability that the differences observed are "real." Cells shaded grey indicate statistically significant differences (p < .05) between at least two of the subgroups.

APPENDIX C: BENCHMARK COMPARISONS

UNDERSTANDING THE BENCHMARK COMPARISONS

Communities use the comparative information provided by benchmarks to help interpret their own resident survey results, to create or revise community plans, to evaluate the success of policy or budget decisions and to measure local government or organizational performance. Taking the pulse of the community has little meaning without knowing what pulse rate is too high and what is too low. When surveys of service satisfaction turn up "good" resident evaluations, it is necessary to know how others rate their services to understand if "good" is good enough or if most other communities are "very good." Furthermore, in the absence of national or peer community comparisons, a community is left with comparing its police protection rating to its street maintenance rating. That comparison is unfair as street maintenance always gets lower ratings than police protection. More illuminating is how residents' ratings of police service compare to opinions about police service in other communities and to resident ratings over time.

A police department that provides the fastest and most efficient service – one that closes most of its cases, solves most of its crimes, and keeps the crime rate low – still has a problem to fix if the residents in the community rate police services lower than ratings given by residents in other cities with objectively "worse" departments. Benchmark data can help that police department – or any department – to understand how well citizens think it is doing.

While benchmarks help set the basis for evaluation, resident opinion should be used in conjunction with other sources of data about budget, population demographics, personnel and politics to help administrators know how to respond to comparative results.

COMPARISON DATA

NRC has designed a method for quantitatively integrating the results of surveys that we have conducted with those that others have conducted. These integration methods have been described thoroughly in *Public Administration Review, Journal of Policy Analysis and Management*, and in NRC's first book on conducting and using citizen surveys, *Citizen Surveys: how to do them, how to use them, what they mean*, published by the International City/County Management Association (ICMA). Scholars who specialize in the analysis of citizen surveys regularly have relied on NRC's work.^{1,2} The method described in those publications is refined regularly and statistically tested on a growing number of resident surveys in NRC's proprietary databases.

Communities in NRC's benchmark database are distributed geographically across the country and range from small to large in population size. Comparisons may be made to all communities in the database or to a subset (i.e., Front Range communities), as in this report. Despite the differences in characteristics across communities, all are in the business of providing services to residents. Though individual community circumstances, resources and practices vary, the objective in every community is to provide services that are so timely, tailored and effective that residents conclude the services are of the highest quality. High ratings in any community, like SAT scores in any teen household, bring pride and a sense of accomplishment.

¹ Kelly, J. & Swindell, D. (2002). Service quality variation across urban space: First steps towards a model of citizen satisfaction, Journal of Urban Affairs, 24, 271-288.

² Van Ryzin, G., Muzzio, D., Immerwahr, S., Gulick, L. & Martinez, E. (2004). Drivers and consequences of citizen satisfaction: An application of the American Customer Satisfaction Index Model to New York City, Public Administration Review, 64, 331-341.

NRC's database of comparative resident opinion is comprised of resident perspectives gathered in citizen surveys from approximately 500 communities whose residents evaluated local government services and gave their opinion about the quality of community life. The comparison evaluations are from the most recent survey completed in each jurisdiction; most communities conduct surveys every year or in alternating years. NRC adds the latest results quickly upon survey completion, keeping the benchmark data fresh and relevant. The City of Westminster chose to have comparisons made to the entire database as well as to the Front Range.

PUTTING EVALUATIONS ONTO THE 100-POINT SCALE

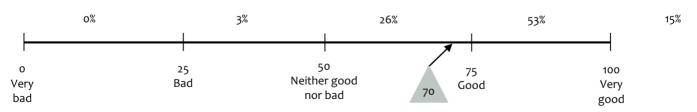

Although responses to many of the evaluative questions were made on a five-point scale with 1 representing the best rating and 5 the worst, the benchmarks are reported on a common scale where 0 is the worst possible rating and 100 is the best possible rating. The margin of error around an average score on the 100-point scale is no greater than plus or minus three points based on all respondents.

The 100-point scale is not a percent. It is a conversion of responses to an average rating. Each response option is assigned a value that is used in calculating the average score. For example, "very good"=100, "good"=75, "neither good nor bad"=50, "bad"=25 and "very bad"=0. If everyone reported "very good," then the average rating would be 100 on the 100-point scale. Likewise, if all respondents gave a "very bad" rating, the result would be 0 on the 100-point scale. If half the respondents gave a score of "very good" and half gave a score of "very bad," the average would be 50, in the middle of the scale (like the center post of a teeter totter) or "neither good nor bad." An example of how to convert survey frequencies into an average rating appears below.

EXAMPLE OF CONVERTING RESPONSES TO THE 100-POINT SCALE

How do you rate the community as a place to live?									
Response option	Total with "don't know"	Step1: Remove "don't know" responses	Total without "don't know"	Step 2: Assign scale values	Step 3: Multiply % by scale value	Step 4: Sum to calculate average rating			
Very good	15%	=15÷(100-2)=	15.3%	100	=15.3% x 100 =	15.3			
Good	53%	=53÷(100-2)=	54.1%	75	=54.1% x 75 =	40.6			
Neither good nor bad	26%	=26÷(100-2)=	26.5%	50	=26.5% x 50 =	13.3			
Bad	3%	=3÷(100-2)=	3.1%	25	=3.1% x 25 =	0.8			
Very bad	0%	=0÷(100-2)=	0%	0	=0% x 0 =	0			
Don't know	2%								
Total	100%		100%			70			

HOW DO YOU RATE THE COMMUNITY AS A PLACE TO LIVE?

INTERPRETING THE RESULTS

Average ratings are compared when similar questions are included in NRC's database, and there are at least five communities in which the question was asked. Where comparisons are available, three numbers are provided in the table. The first column is Westminster "percent positive" rating (e.g., "very good" or "good," "strongly agree" or "agree," "very safe" or "somewhat safe"). The second column is the rank assigned to Westminster rating among communities where a similar question was asked. The third column is the number of communities that asked a similar question. The fourth column shows the comparison of Westminster rating to the benchmark.

Where comparisons for quality ratings and those related to resident behavior, circumstance or to a local problem were available (e.g., the percent of residents having contacted the City in the last 12 months), the City of Westminster's results were generally noted as being "higher" than the benchmark, "lower" than the benchmark or "similar" to the benchmark. In instances where ratings are considerably higher or lower than the benchmark, these ratings have been further demarcated by the attribute of "much," (for example, "much lower" or "much higher"). These labels come from a statistical comparison of Westminster's rating to the benchmark where a rating is considered "similar" if it is within the margin of error; "higher" or "lower" if the difference between Westminster's rating and the benchmark is greater than but less than twice the margin of error; and "much higher" or "much lower" if the difference between Westminster's rating and the benchmark is more than twice the margin of error.

Wheat Ridge city, CO	30,166
Windsor town, CO	

APPENDIX D: SURVEY METHODOLOGY

SURVEY INSTRUMENT DEVELOPMENT

General citizen surveys, such as this one, ask recipients for their perspectives about the quality of life in the city, their use of City amenities, their opinion on policy issues facing the City and their assessment of City service delivery. The 2014 Westminster Citizen Survey is the 12th iteration of the survey since it was first administered by National Research Center, Inc. (NRC) in 1992. To preserve trends over time, the 2012 survey served as the foundation for the 2014 citizen survey instrument. Questions that asked about topics found to be less salient in 2014 were eliminated and a list of topics for new questions was generated. All questions were prioritized and an optimal composition of topics and questions were selected to be included on the final survey. Through this iterative process between City staff and NRC staff, a final five-page questionnaire was created.

SELECTING SURVEY RECIPIENTS

"Sampling" refers to the method by which survey recipients are chosen. The "sample" refers to all those who were given a chance to participate in the survey. All households located in the city boundaries were eligible for the survey. Because local governments generally do not have inclusive lists of all the residences in the jurisdiction (tax assessor and utility billing databases often omit rental units), lists from the United States Postal Service (USPS), updated every three months, usually provide the best representation of all households in a specific geographic location. NRC used the USPS data to select the households that will receive a survey.

A larger list than needed was pulled so that a process referred to as "geocoding" could be used to eliminate addresses from the list that were outside the study boundaries. Geocoding is a computerized process in which addresses are compared to electronically mapped boundaries and coded as inside or outside desired boundaries. All addresses determined to be outside the study boundaries were eliminated from the potential mailing list.

A stratified, systematic sampling method was used with the remaining addresses to create a mailing list of 3,000 Westminster households, so that the number of surveys sent to each of the three school districts was roughly equal to the proportion of all households in each district (Jefferson County=39%, Adams 12=31% and Adams 50=30%). Attached units within each district were oversampled to compensate for detached unit residents' tendency to return surveys at a higher rate.

An individual within each household was selected using the birthday method (asking the adult in the household who most recently had a birthday to complete the questionnaire). The underlying assumption in this method is that day of birth has no relationship to the way people respond to surveys. This instruction was contained in the cover letter accompanying the questionnaire.

SURVEY ADMINISTRATION AND RESPONSE

Each selected household was contacted three times. First, a prenotification announcement informing the household members that they had been selected to participate in the survey was sent. Approximately one week after mailing the prenotification, each household was mailed a survey containing a cover letter signed by the Mayor enlisting participation. The packet also contained a postage-paid return envelope in which the survey recipients could return the completed questionnaire to NRC. A reminder letter and survey, scheduled to arrive one week after the first survey was the final contact. The second cover letter asked those who had not completed the survey to do so and those who had already done so to refrain from turning in another survey. The cover letters included a web link where respondents could complete the survey online if they preferred. Only 50 respondents opted to complete the survey via the web.

The mailings were sent in March of 2014 and completed surveys were collected over the following five weeks. About 4% of the 3,000 surveys were returned because the housing unit was vacant or the postal service was unable to deliver the survey as addressed. Of the 2,884 households receiving a survey, 847 completed the survey, providing an overall response rate of 29%. Response rates for each school district are provided in the following figure.

Westminster Response Rates 2014								
Geographic area	Number of surveys mailed	Number of returned postcards	Number of completed surveys	Response rate				
Jefferson County	1,171	36	350	31%				
Adams 12	924	45	270	31%				
Adams 50	905	35	227	26%				
City overall	3,000	116	847	29%				

95% CONFIDENCE INTERVALS

The 95% confidence interval (or "margin of error") quantifies the "sampling error" or precision of the estimates made from the survey results. A 95% confidence interval can be calculated for any sample size, and indicates that in 95 of 100 surveys conducted like this one, for a particular item, a result would be found that is within plus or minus three percentage points of the result that would be found if everyone in the population of interest was surveyed. The practical difficulties of conducting any resident survey may introduce other sources of error in addition to sampling error. Despite best efforts to boost participation and ensure potential inclusion of all households, some selected households will decline participation in the survey (potentially introducing non-response error) and some eligible households may be unintentionally excluded from the listed sources for the sample (referred to as coverage error).

While the 95 percent confidence level for the survey is generally no greater than plus or minus three percentage points around any given percent reported for the entire sample, results for subgroups will have wider confidence intervals. Where comparisons are made between subgroups, the margins of error are less precise than the margin of error for the whole sample. For each of the three school districts in Westminster (Jefferson, Adams 12 or Adams 50), the margin of error rises to approximately plus or minus 8% since the number of respondents were approximately 350 for Jefferson County, 270 for Adams 12 and 227 for Adams 50. Comparisons by respondent demographics have margins of error ranging from plus or minus 5% for 450 respondents to as much as plus or minus 11% for approximately 80 respondents.

SURVEY PROCESSING (DATA ENTRY)

Mailed surveys were submitted via postage-paid business reply envelopes. Once received, NRC staff assigned a unique identification number to each questionnaire. Additionally, each survey was reviewed and "cleaned" as necessary. For example, a question may have asked a respondent to pick two items out of a list of five, but the respondent checked three; staff would choose randomly two of the three selected items to be coded in the dataset.

Once cleaned and numbered, all surveys were entered into an electronic dataset. This dataset was subject to a data entry protocol of "key and verify," in which survey data were entered twice into an electronic dataset and then compared. Discrepancies were evaluated against the original survey form and corrected. Range checks as well as other forms of quality control were also performed.

Data from the web surveys were automatically entered into an electronic dataset and generally required minimal cleaning. The web survey data were downloaded, cleaned as necessary and then merged with the data from the mail survey to create one complete dataset.

Prepared by National Research Center, Inc.

WEIGHTING THE DATA

The demographic characteristics of the survey sample were compared to those found in the 2010 Census and the 2011 American Community Survey (ACS) 5-year estimates for adults in the city. Sample results were weighted using the population norms and normative data for the school districts (provided by the City) to reflect the appropriate percent of those residents and geographic areas in the city. Other discrepancies between the whole population and the sample were also aided by the weighting due to the intercorrelation of many socioeconomic characteristics.

The variables used for weighting were respondent gender, age, tenure (rent versus own), housing unit type (attached versus detached), ethnicity, race and school district. This decision was based on:

- The disparity between the survey respondent characteristics and the population norms for these variables
- The saliency of these variables in differences of opinion among subgroups
- The historical profile created and the desirability of consistently representing different groups over the years

Several different weighting "schemes" are tested to ensure the best fit for the data.

The weighting process actually begins at the point of sampling. Knowing that residents in single family dwellings are more likely to respond to a mail survey, NRC oversamples residents of multi-family dwellings to ensure they are accurately represented in the sample data. Rather than giving all residents an equal chance of receiving the survey, this is systematic, stratified sampling, which gives each resident of the community a known chance of receiving the survey (and apartment dwellers, for example, a greater chance than single family home dwellers). As a consequence, results must be weighted to recapture the proper representation of multi-family housing dwellers.

The results of the weighting scheme are presented in the table on the following page.

	2014 Westminster Citizen Su	rvey Weighting Table	
Characteristic	Population Norm ¹	Unweighted Data	Weighted Data
Housing			
Rent home	35%	18%	32%

ANALYZING THE DATA

The electronic dataset was analyzed by NRC staff using IBM's Statistical Package for the Social Sciences (SPSS). For the most part, frequency distributions and the "percent positive" (i.e., "very good" or "good," "strongly agree" or "somewhat agree," "very well" or "well," etc.) are presented in the body of the report. A complete set of frequencies for each survey question is presented in *Appendix A: Complete Set of Survey Frequencies*.

Also included are results by school district, fire service area and respondent characteristics (*Appendix B: Survey Results Compared by* Respondent Characteristics). Chi-square or ANOVA tests of significance were applied to these breakdowns of selected survey questions. A "p-value" of 0.05 or less indicates that there is less than a 5% probability that differences observed between groups are due to chance; or in other words, a greater than 95% probability that the differences observed in the selected categories of the sample represent "real" differences among those populations. Where differences between subgroups are statistically significant, they have been marked with grey shading in the appendices.

WESTMINSTER

Dear City of Westminster Resident,

Your household has been randomly selected to participate in the City of Westminster's 2014 Citizen Survey. You will receive a copy of the survey next week in the mail with instructions for completing and returning it. Your feedback will help determine future decisions that will affect your community. Thank you in advance for helping us with this important project! If you have any questions, please contact Ben Goldstein in the City Manager's Office at 303-658-2007.

Sample Custom Questions

Questions asked on the 2014 Westminster Citizen Survey (numbers 19-23 on the 2014 survey); some or all of these might be valid to ask again in 2016:

1. When thinking about why you choose to live in Westminster, please rate how important, if at all, each of the following attributes is to you as it relates to Westminster as a place to live.

	Highly	Moderately	Not at all
	<u>important</u>	<u>important</u>	<u>important</u>
Physical appearance of development in the City		2	3
Quality of neighborhoods	1	2	3
Variety of neighborhoods	1	2	3
Convenience of shopping in the City	1	2	3
Convenience to employment		2	3
Access to transit	1	2	3
Open space/trails	1	2	3
Recreation centers	1	2	3
Recreation programs/sports	1	2	3
Parks/playgrounds	1	2	3
Libraries	1	2	3
Sense of safety in the City	1	2	3
Schools	1	2	3

2.	In November 2004, voters in the Denver Metro Area approved funding for the RTD FasTracks mass transit project,
	which included Northwest Commuter Rail service from Denver to Longmont, including Westminster, Broomfield,
	Louisville and Boulder. How important is it to you, if at all, that commuter rail service is completed in the Northwest
	Corridor ²

()	Essen	tial
•	1.220	ша

- O Very important
- O Somewhat important
- O Not at all important
- O Don't know

3	To what extent would you support or oppose a tax initiative that would provide additional public funding to RTD (to be
	paid back in the future) to accelerate completion of the Northwest Commuter Rail line?

- O Strongly support
- O Somewhat support
- O Somewhat oppose
- O Strongly oppose

4. The City is considering redevelopment of the former Westminster Mall site as an urban scaled development downtown-like development consisting of office buildings, retail shops, restaurants, entertainment, and multi-story residential buildings). To what extent do you support or oppose this type of redevelopment?

- O Strongly support
- O Somewhat support
- O Somewhat oppose
- O Strongly oppose
- O Don't know

5. In the last 12 months, about how many times, if at all, have you or another household member ridden a bicycle...

	2 times a week	2 to 4 times	Once a month	
	<u>or more</u>	<u>a month</u>	or less	Not at all
To shop, get a meal, or run errands	1	2	3	4
For commuting	1	2	3	4
For fun or exercise	1	2	3	4

<u>POTENTIAL NEW QUESTIONS FOR 2016</u> – Identifying and Funding Priorities (these would need to be wordsmithed specific to Westminster):

1. Please indicate how important, if at all, each of the following projects and issues will be for the City to address over the next five years:

	Essential	Very important	Somewhat important	Not at all important	Don't know
New indoor arena at the Fairgrounds	1	2	3	4	5
New Police Department building	1	2	3	4	5
Redeveloping downtown	1	2	3	4	5
Preservation of open space	1	2	3	4	5
Maintain and improve streets	1	2	3	4	5

2. Please rate how important, if at all, each of the following strategic planning areas are to the overall quality of life in the County:

Essentia	Very I important	Somewhat important	Not at all important	Don't know
Cooperation between governments	2	3	4	5
Economic development1	2	3	4	5
Education1	2	3	4	5
Healthy community1	2	3	4	5
Recreation and cultural opportunities1	2	3	4	5
Safe community	2	3	4	5
Community and social supports1	2	3	4	5

3. How much of a priority, if any, should it be for the Town to address each of the following in the next two years?

	High	Medium	Not a
	Priority	priority	priority
Commuter parking for access to public transportation	1	2	3
Bike storage facilities near bikeways, public transportation and schools	1	2	3
A Town bus that would provide fixed route service circulating around the community	1	2	3
Express public transportation connections to established commuter hubs such as			
Midtown or Commuter Rail	1	2	3

When evaluating support for a specific proposal, it is especially important to include context about the specific cost of or tradeoffs relating to the proposal.

- 4. The City is considering building a new, multi-field sports park for baseball, softball, football and soccer that also includes paved walking trails, concessions and a bathroom facility. Would you support a bond election for this sports park if paying for it required a \$90 annual increase for a \$100,000 home valuation?
 - O Strongly support
 - O Somewhat support
 - O Somewhat oppose
 - O Strongly oppose

5.	 The City is considering renovating the City Swimming pool or replacing it with a from the following that that best reflects your view: In order to keep the indoor pool open, I am willing to continue to pay the cubased on a \$170,000 home). In order to cover the cost of renovations to the indoor pool, I am willing to increase the subset of I am not willing to pay any subsidy, which would result in the closing of the color I don't know. 	urrent suncrease to	bsidy (abou he subsidy (350 per year	t \$9.07 pe to \$20 per	r year,
Fo	r situations when specific amounts are not yet known				
6.		Strongly	Somewhat	Somewhat	o fund Strongly
	Schools	support 1	support 2	oppose 3	<u>oppose</u> 4
	Libraries		$\frac{2}{2}$	3	4
	Public safety/fire and rescue services		2	3	4
	Animal shelter		2	3	4
	Youth ball fields		2	3	4
	Indoor sports complex		2	3	4
	Outdoor pool/splash park Outdoor trails		$\frac{2}{2}$	3	$\frac{4}{4}$
7.	Minimum wage is \$8.23 per hour. Do you consider minimum wage to be? □ Too high □ Somewhat high □ About right □ Somewhat le		☐ Too low	, 🔲 Do	on't know
8.	To what extent would you support or oppose an increase in the minimum wage ☐ Strongly support ☐ Somewhat support ☐ Somewhat oppose ☐ Strongly support ☐ Somewhat support ☐ Somewhat oppose ☐ Strongly support ☐ Somewhat oppose ☐ Strongly support ☐ Somewhat support ☐ Somewhat oppose ☐ Strongly support ☐ Somewhat support ☐ Somewhat oppose ☐ Strongly support ☐ Somewhat support ☐ Somewhat oppose ☐ Strongly support ☐ Somewhat Somewhat support ☐ Somewha	pongly opp	oose 🗖 I	Oon't knov	W
9.	Please rate each of the following aspects of quality of life in ABC: Excellent	Good	Fair	Poor	Don't know
	Variety of housing options	2	3	4	5
	Availability of affordable quality housing	2	3	4	5
	Cost of living in ABC	2	3	4	5
	Ability to earn a livable wage	2	3	$\frac{4}{4}$	$\frac{5}{5}$

The below question could exist in the demographic section. No understand recycling habits, items can be removed/added as yo	u see fit.			e could tak	xe to
15. How often, if at all, do you do each of the following, cons			could? Sometimes	: Usually	Always
Recycle at home		2	3	4	<u> </u>
Purchase goods or services from a business located in AP		2	3	4	5
Eat at least 5 portions of fruits and vegetables a day		2	3	4	5
Participate in moderate or vigorous physical activity		2	3	4	5
Read or watch local news (via television, paper, computer		2	3	4	5
Vote in local elections		2	3	4	5
		_	_	•	J
16. Please indicate whether or not you have done each of the fo	ollowing in the l	last 12 montl	ns.	N/	V.
Made efforts to conserve water					<u>Yes</u> 2
Made efforts to make your home more energy efficient					2
,					2
17. Please indicate to what extent, if at all, you agree that each of					
	Strong agree	-	t Somewhat disagree	Strongly disagree	Don't know
Promotes "green" behaviors like recycling		2	3	4	5
Preserves natural resources like open space and parks		2	3	$\frac{1}{4}$	5
Protects wetlands, rivers and other waterways	1	2	3	4	5
Supports healthy behaviors like walking and biking		2	3	4	5
Maintains air quality	1	0	0		_
Supports access to locally-produced food		$\frac{2}{2}$	3	4	5

Other possible questions based on Councillor feedback:

18. Minimum wage: Do you strongly support, somewhat support, somewhat oppose or strongly oppose raising Colorado's minimum wage to \$12 an hour?

3

19. Affordable housing: As we continue to grow as a city, do you strongly support, somewhat support, somewhat oppose or strongly oppose that providing a diverse housing stock that includes homes that are affordable for our residents is important for overall community health, economic growth and education.

Other possible questions based on Department feedback:

- **20. Sustainability** The City has a vision to be one of the most Sustainable cities in America. Sustainability is defined as meeting the needs of the present (citizens) without compromising the ability for future (citizens) to meet their own needs. To what extent do you value this aspect of the City's new Vision? (strongly support, somewhat support, somewhat oppose or strongly oppose)
- 21. "Sustainability" can be further broken down into six categories. Please rate how well the city is doing to preserve or protect these resources:
- Natural resources
- Physical Infrastructure
- o Economic resources
- o Demographic resources (i.e.; public health)
- o Social resources (equity, community engagement)
- o Cultural Resources (hometown feel, diversity)
